

The following pages are a speculative archival summarization of a universe where the travel to and colonization of Mars becomes a real possibility. As climate change progresses into the 2070s, the Earth becomes increasingly unlivable, and Mars' conditions are deemed livable with the right technological enhancements. This book will explore the development of art and design in a new technological universe, one that has been pushed to the brink and has to wrestle with the prospect of starting over from scratch. As you flip through the pages, consider how the art you see makes you feel. What is each piece trying to convince you of? How might the artwork be manipulating you? What is the intention behind every choice? I hope this book gives you a new perspective on the impact of art and design.

Thank you for reading.

VENTURE TO MARS

Experience the ultimate adventure of a lifetime with a vacation to Mars! As space travel becomes increasingly accessible, you now have the opportunity to explore the Red Planet like never before. On this once-in-a-lifetime trip, you'll witness stunning landscapes that you've only ever seen in science fiction movies. Imagine hiking up towering mountains, traversing vast deserts, and discovering hidden valleys, all while taking in breathtaking views of the Martian horizon. But your adventure doesn't end there. You'll also get to experience the unique thrill of being on a different planet. With less gravity than Earth, you'll feel lighter and more agile as you explore the planet's surface. And at night, you'll be mesmerized by the stars, which appear brighter and closer than ever before. Your accommodations will be state-of-the-art, with everything you need to stay comfortable during your stay. From luxurious sleeping quarters to gourmet dining options, our team has thought of everything to ensure your experience is unforgettable. So why wait? Book your trip to Mars today and embark on a journey that will be the envy of all your friends and family. This is an adventure you'll never forget!

[Embargoed until June 1st, 2075]

We are proud to announce the successful creation of Helix Station I, a Martian space station that can sustain human life for indefinite periods of time. This is a monumental achievement for our company and for human exploration of the universe.

The Helix I is the result of years of research and development, and is equipped with state-of-the-art technology to support human life in the harsh environment of Mars. The Helix I includes living quarters, a laboratory, a greenhouse, and a variety of support systems to ensure the health and safety of its inhabitants.

One of the most significant challenges we faced was developing a system for generating oxygen and removing carbon dioxide from the atmosphere. To overcome this challenge we used a combination of cutting-edge technology and natural processes, such as growing plants in the greenhouse to produce oxygen.

The space station is designed to be fully self-sufficient, with a closed-loop system that recycles water and other resources. It is also equipped with a backup power system in case of emergencies.

Our ultimate goal is to use the Helix I as a stepping stone for further exploration of the Red Planet. This achievement is a testament to the ingenuity and perseverance of our team and the potential for human exploration to push the boundaries of what is possible.

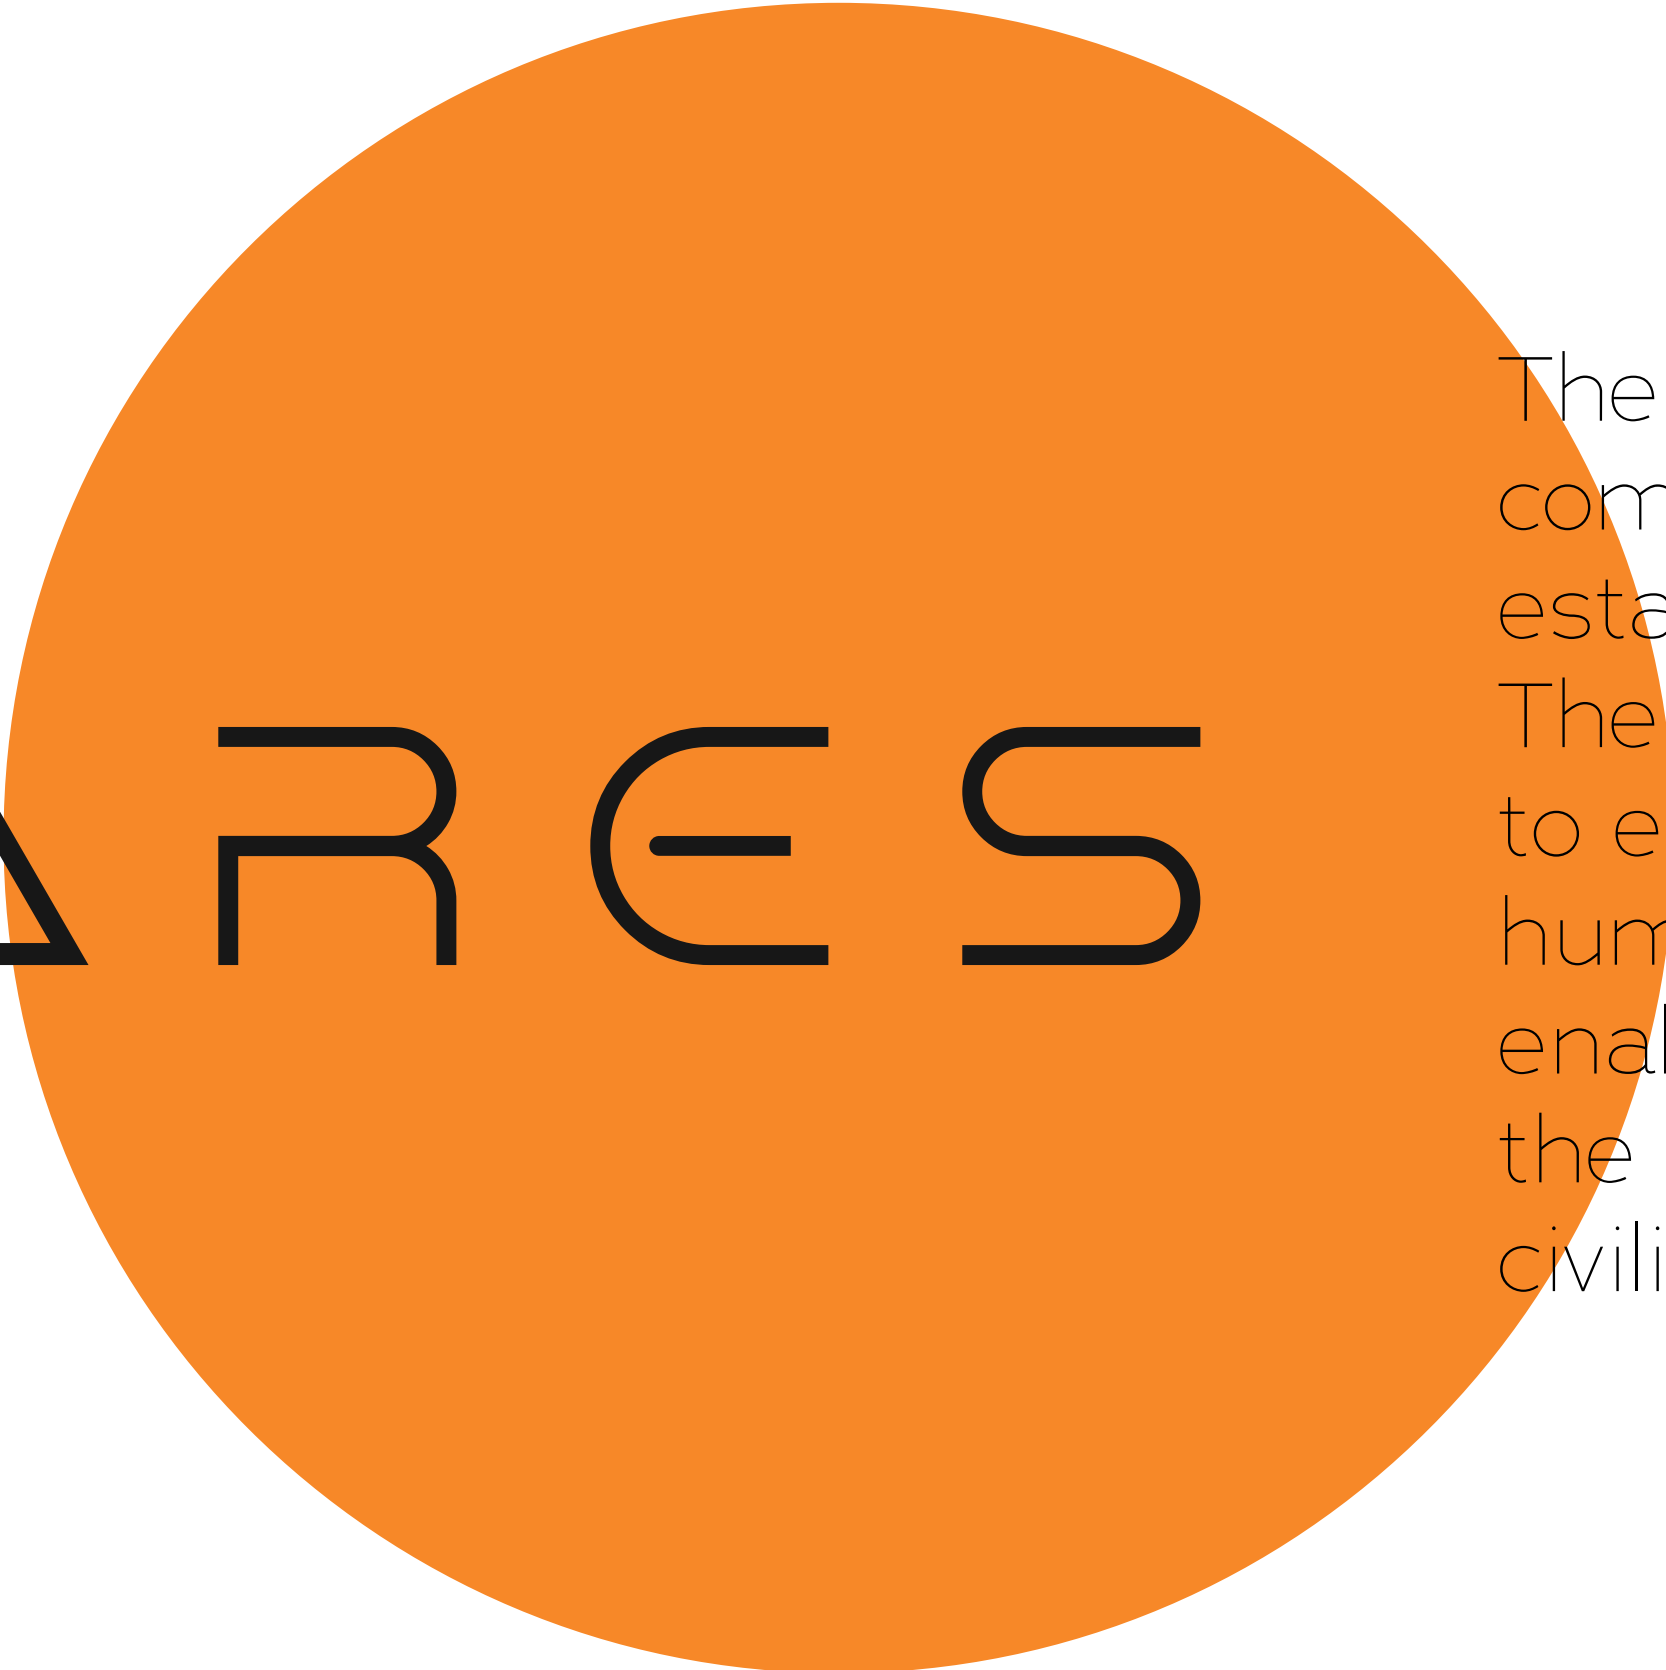

We are excited to continue our work in space exploration and look forward to the new discoveries and advancements that will come from this incredible achievement.

The Ares Corporation

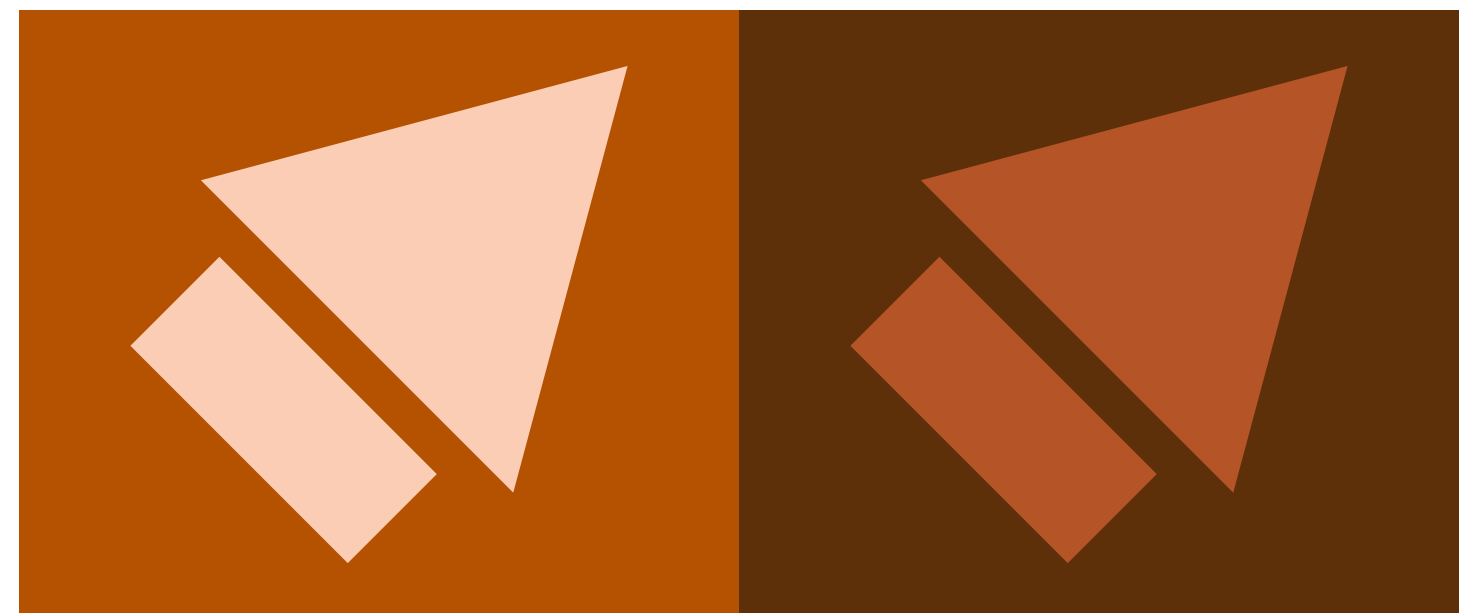

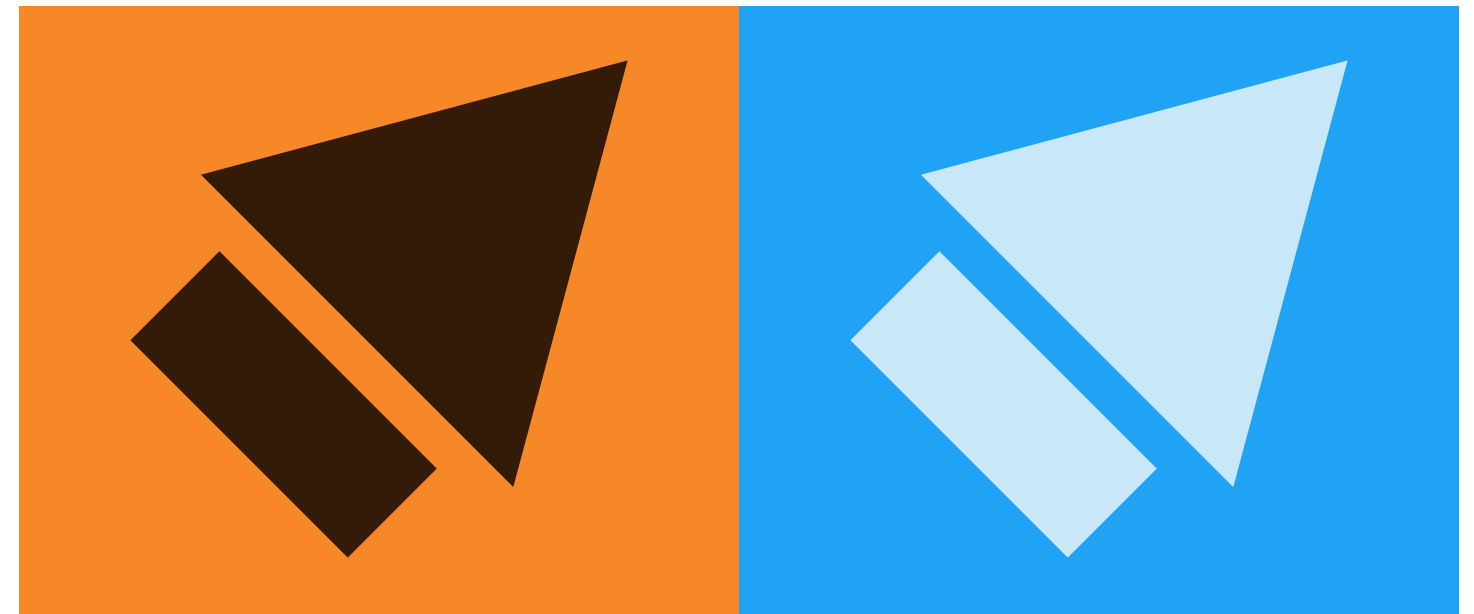

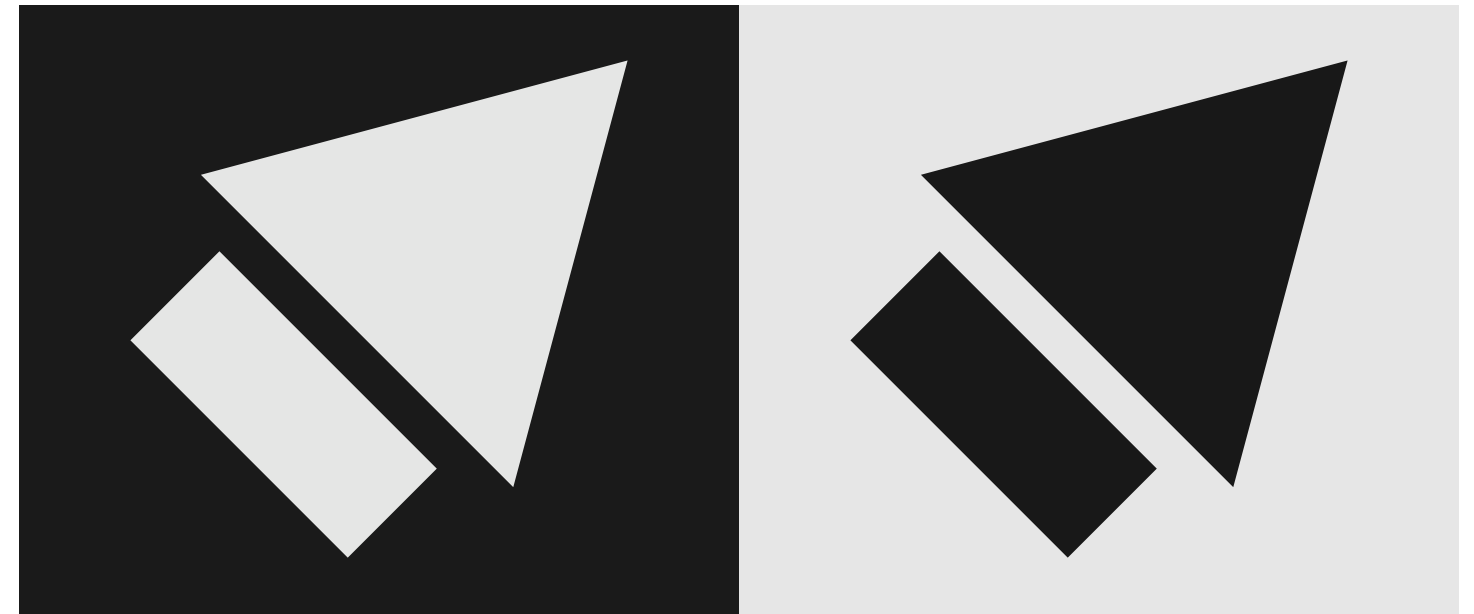

**Ares
Corporation**

ARES

The Ares Corporation is the company that led the race to establish civilian life on Mars. The company's mission was to establish a sustainable human presence on Mars, enabling colonization and the development of a new civilization.

The company's approach to space exploration involved utilizing groundbreaking technology and scientific advancements to create a fully self-sufficient ecosystem on Mars. This included the development of advanced habitats, sustainable agriculture, and new energy solutions.

The Ares Corporation relied on a team of experts, and also worked closely with aerospace partners, government agencies, and other private companies to develop a Martian infrastructure. The Ares Corporation wanted to lead a new era of civilian life on Mars.

Design Summary

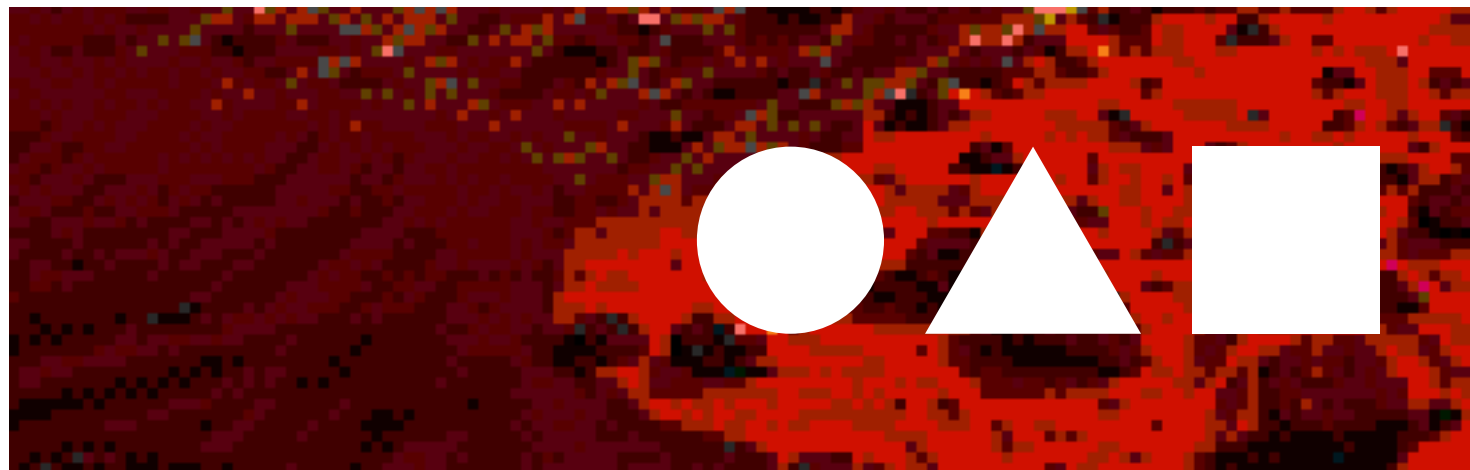

DUNE RISE

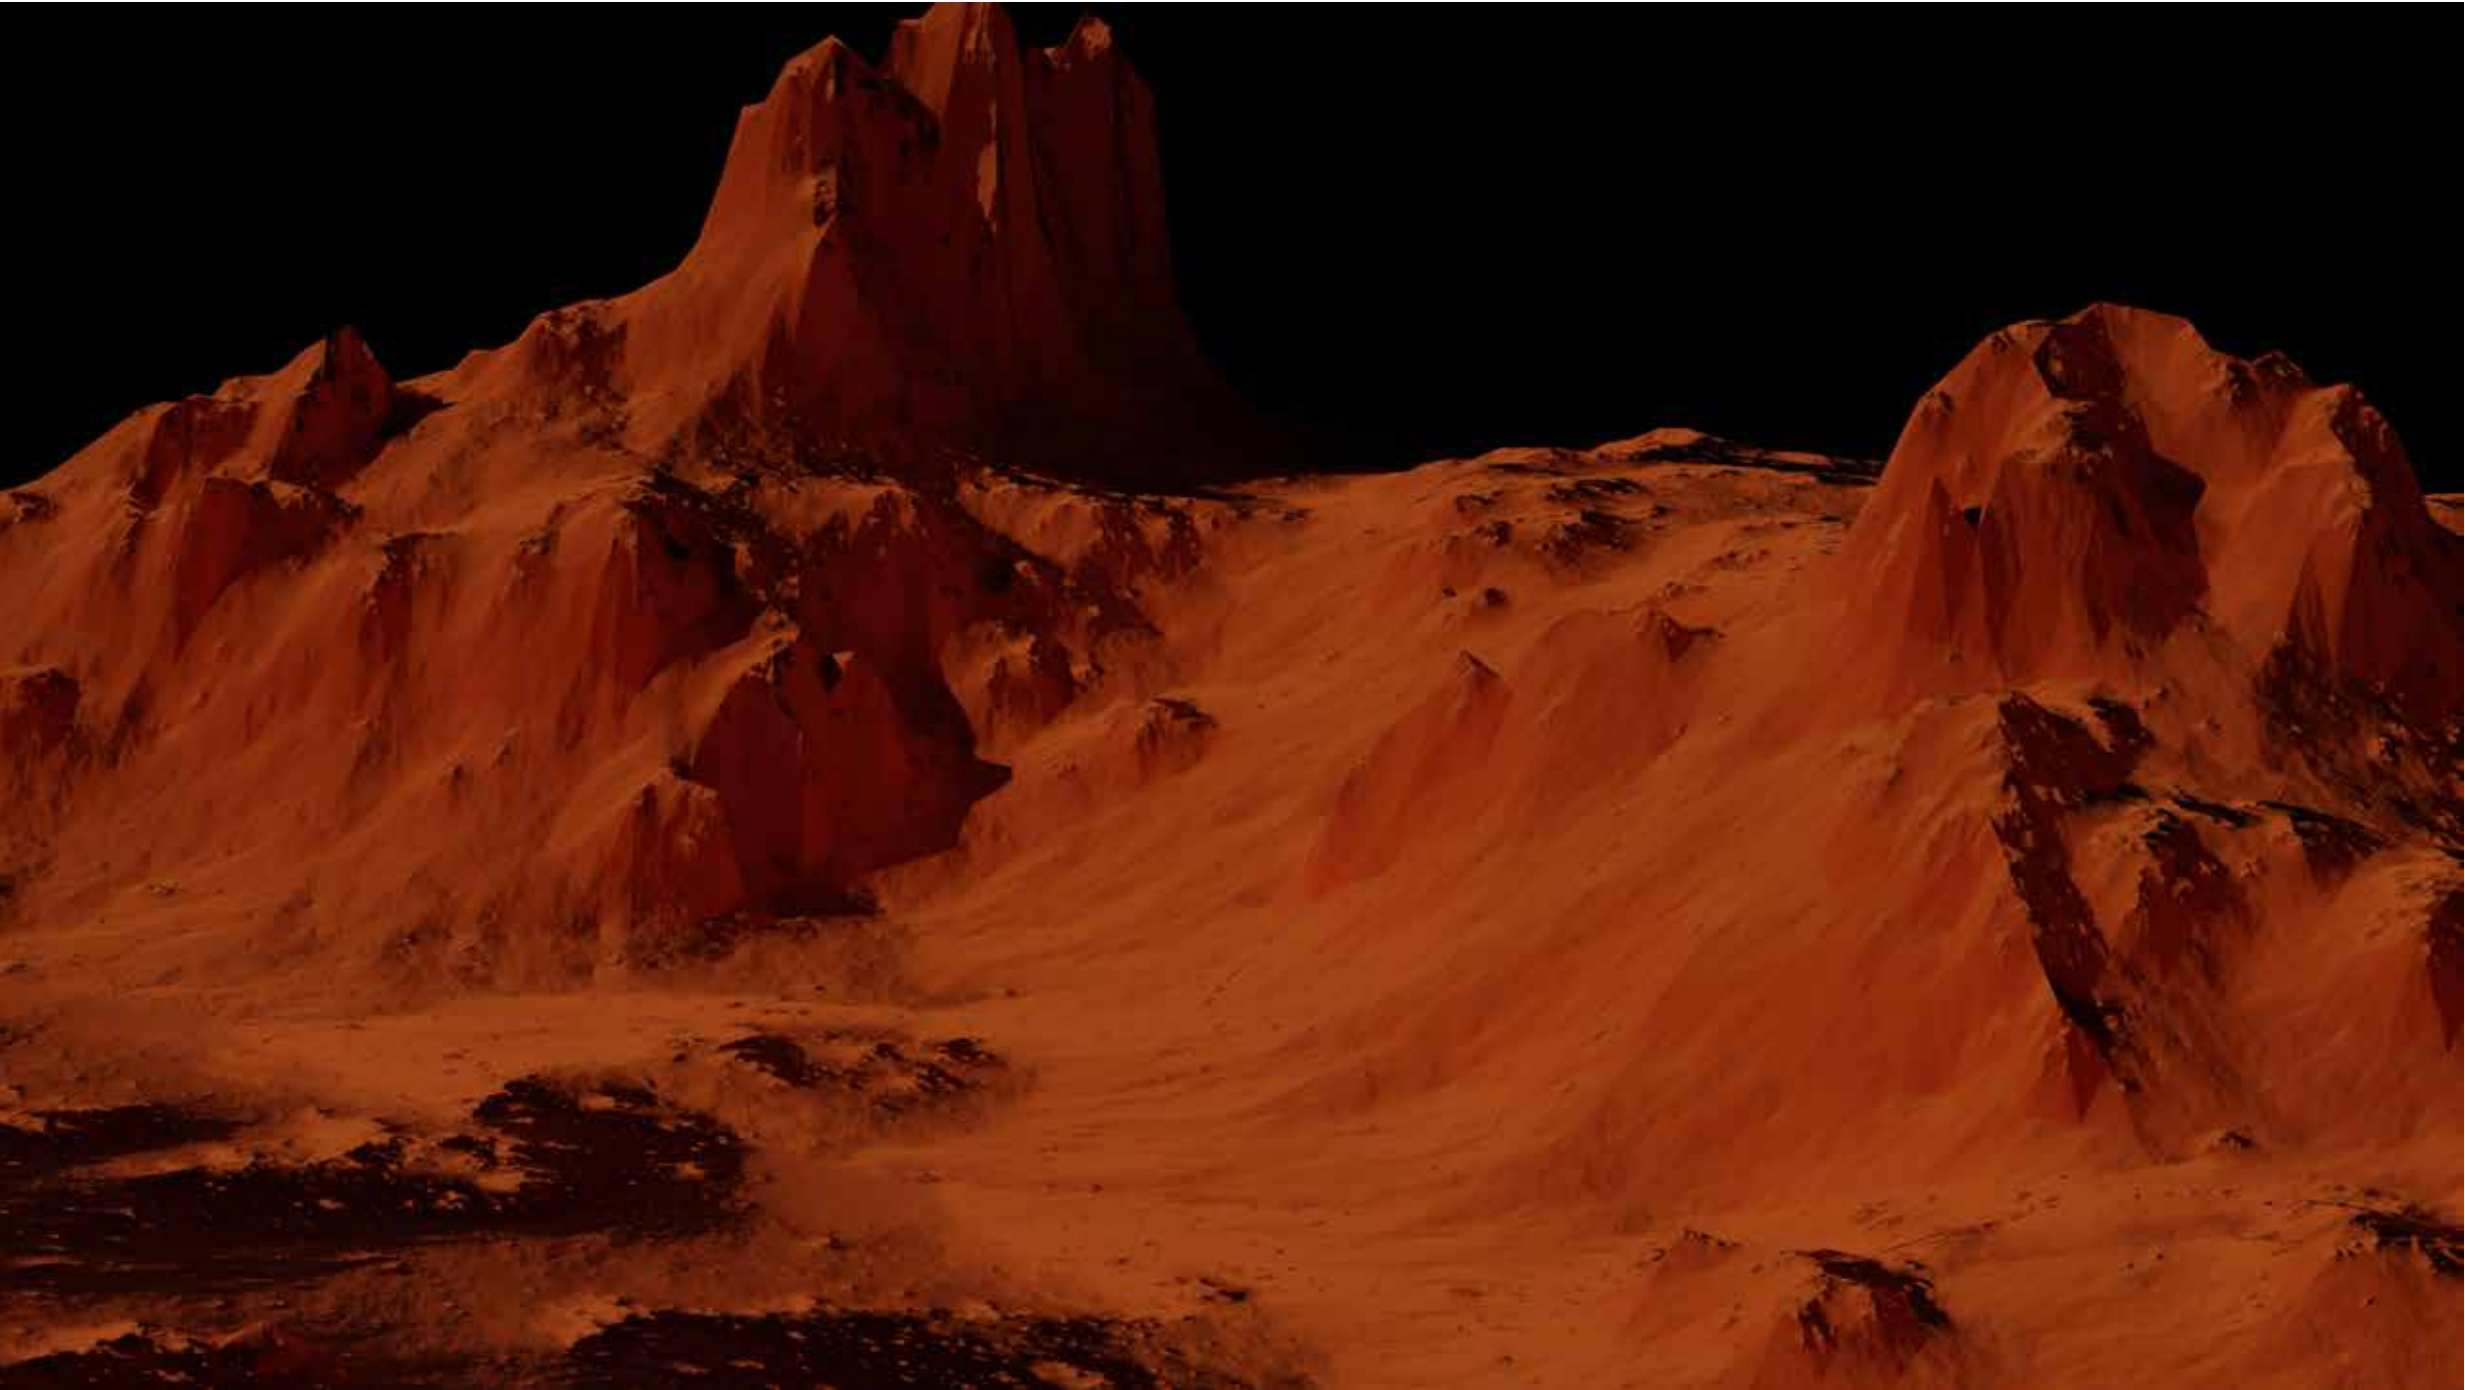

A d r i a n n a

Times New Roman

Ares' design identity is sleek, geometric, and postmodern. Its dominant colors are highly saturated oranges, greys, and accents of blues, creating an identifiably futuristic look. Its primary typefaces are very geometric and readable. Its imagery involves primarily images of Mars and astriononic technology, making use of techniques such as dithering to give further emphasis to the company's focus on technology.

Unknown.

[Embargoed until April 12th, 2078]

Today marks a historic moment in human exploration as the first civilian mission to Mars has been successfully launched by the Ares international team of astronauts. This milestone achievement has been years in the making, with countless hours of research, development, and testing going into the mission.

The crew will spend approximately two years traveling to the Red Planet, with a scheduled arrival in early 2080. Upon arrival, they will begin their mission to explore and study the Martian surface, conducting experiments and collecting data that will inform future missions and contribute to our understanding of the universe.

The mission is a testament to the ingenuity, perseverance, and collaboration of the international scientific community. It represents a significant step forward in our understanding of the universe and our place in it.

We wish the crew of this historic mission the best of luck as they embark on this incredible journey. We look forward to following their progress and eagerly anticipate the groundbreaking discoveries that they will undoubtedly make.

[Date: March 10th, 2081]

Computer log for ██████████.

Today marks the 412th sol of my research on growing plant life on Mars. The plants in my laboratory have been growing exceptionally well, and I'm pleased to report that we have harvested our first crop of potatoes.

The soil in the laboratory has been carefully cultivated with nutrients and microbes to simulate the conditions of Earth's soil. We have also been using LED lights to simulate the sunlight that plants require for photosynthesis.

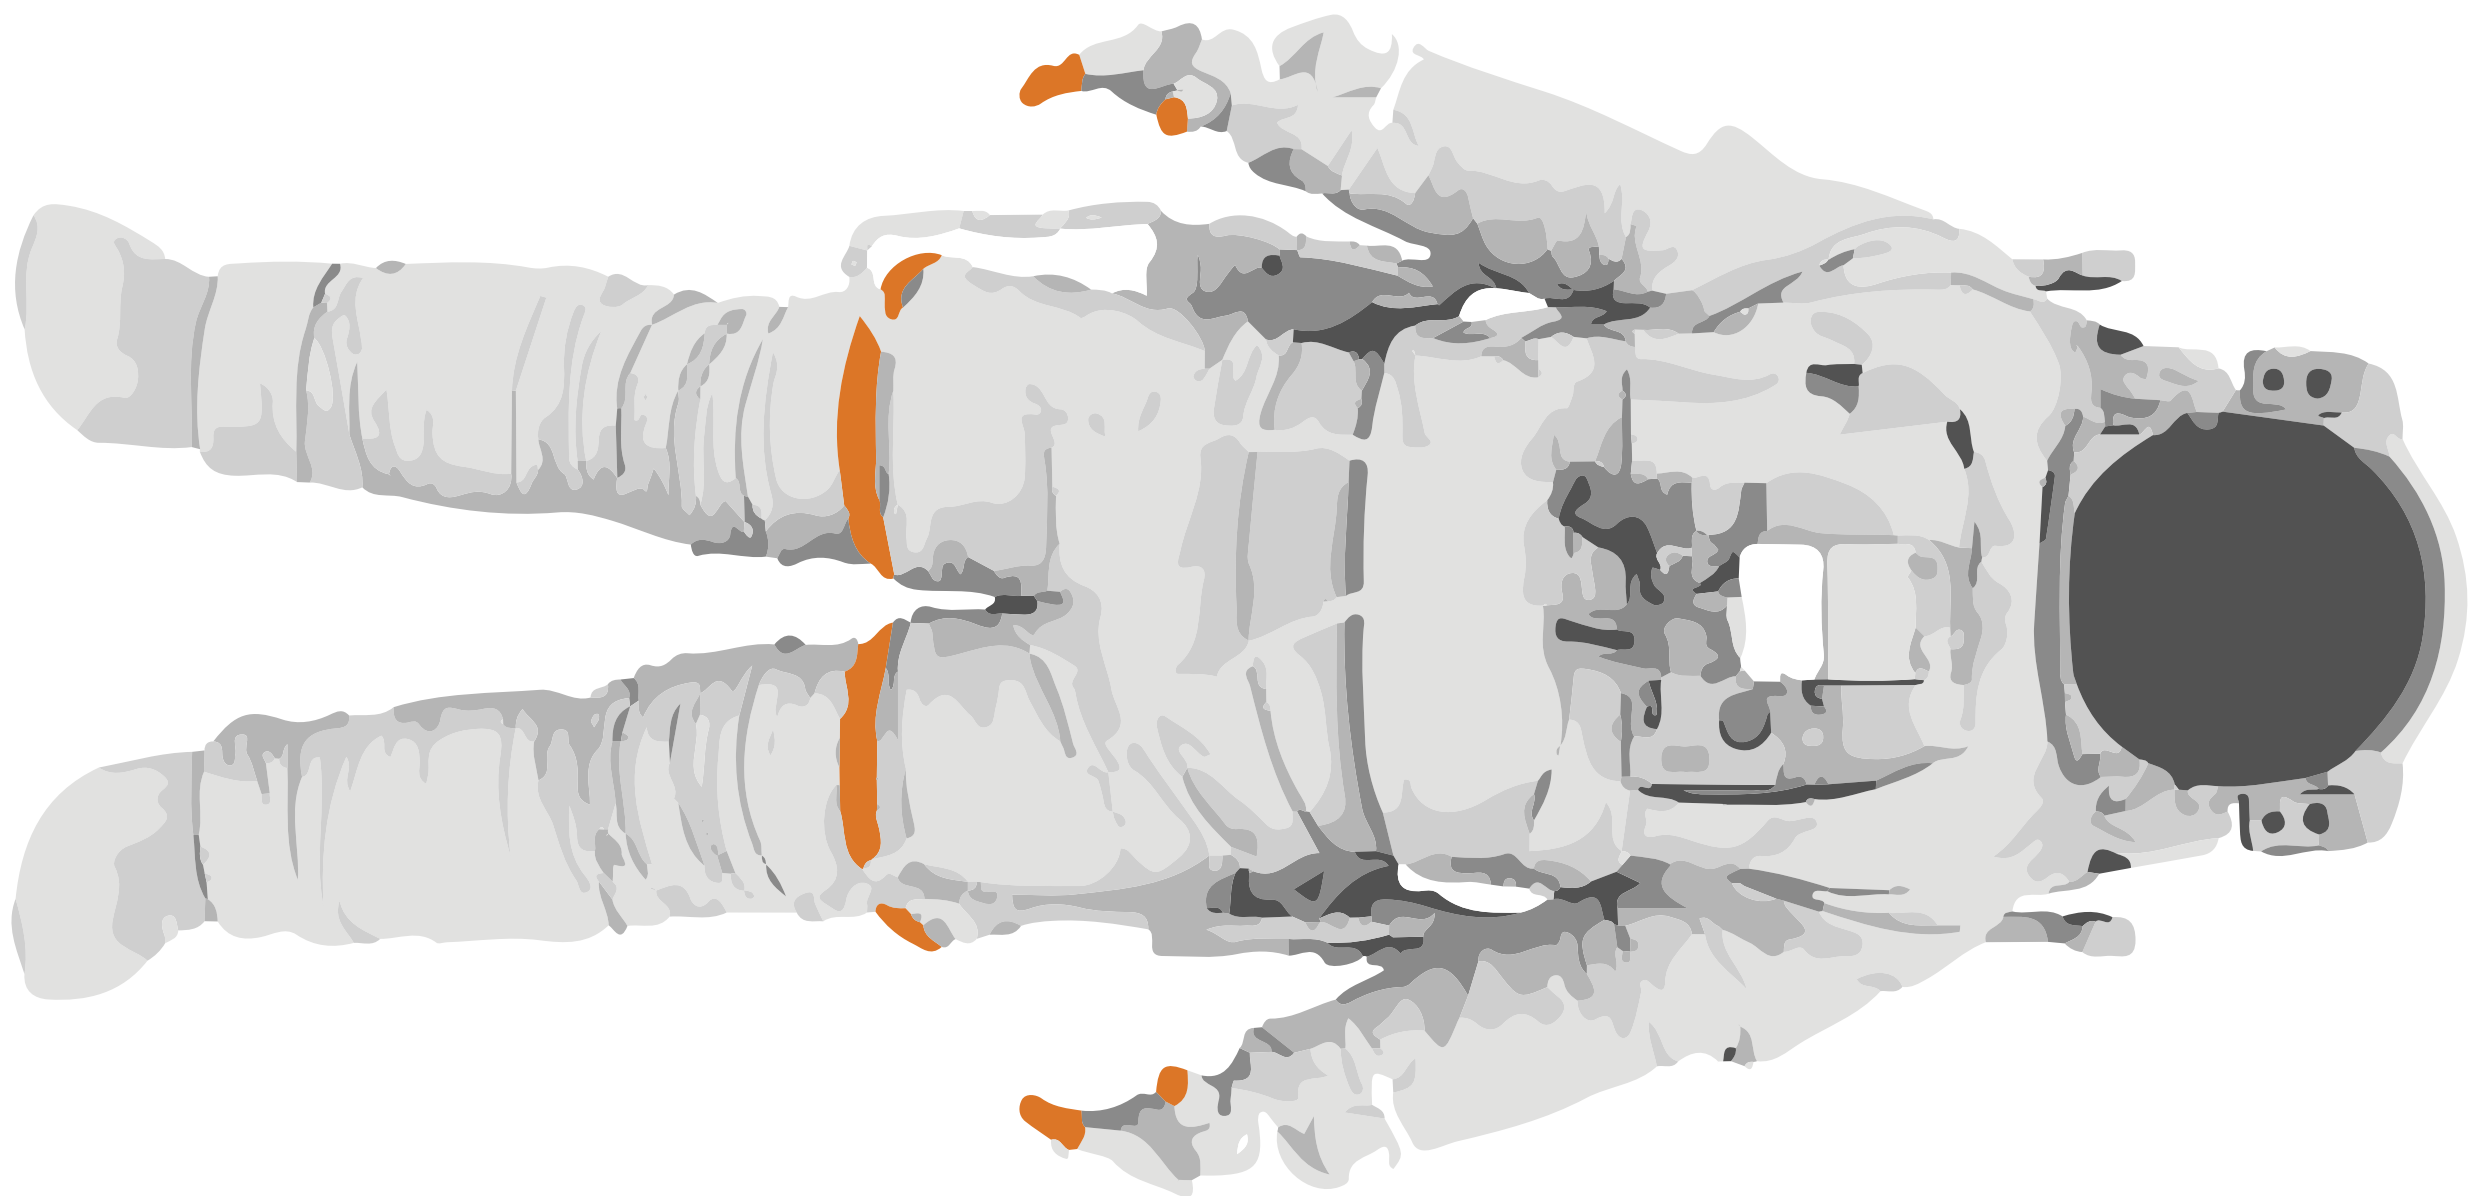

The temperature and humidity in the laboratory have been maintained at optimal levels for plant growth, and the plants have been thriving. We have been carefully monitoring the plants' growth and taking daily measurements of their height, width, and leaf size.

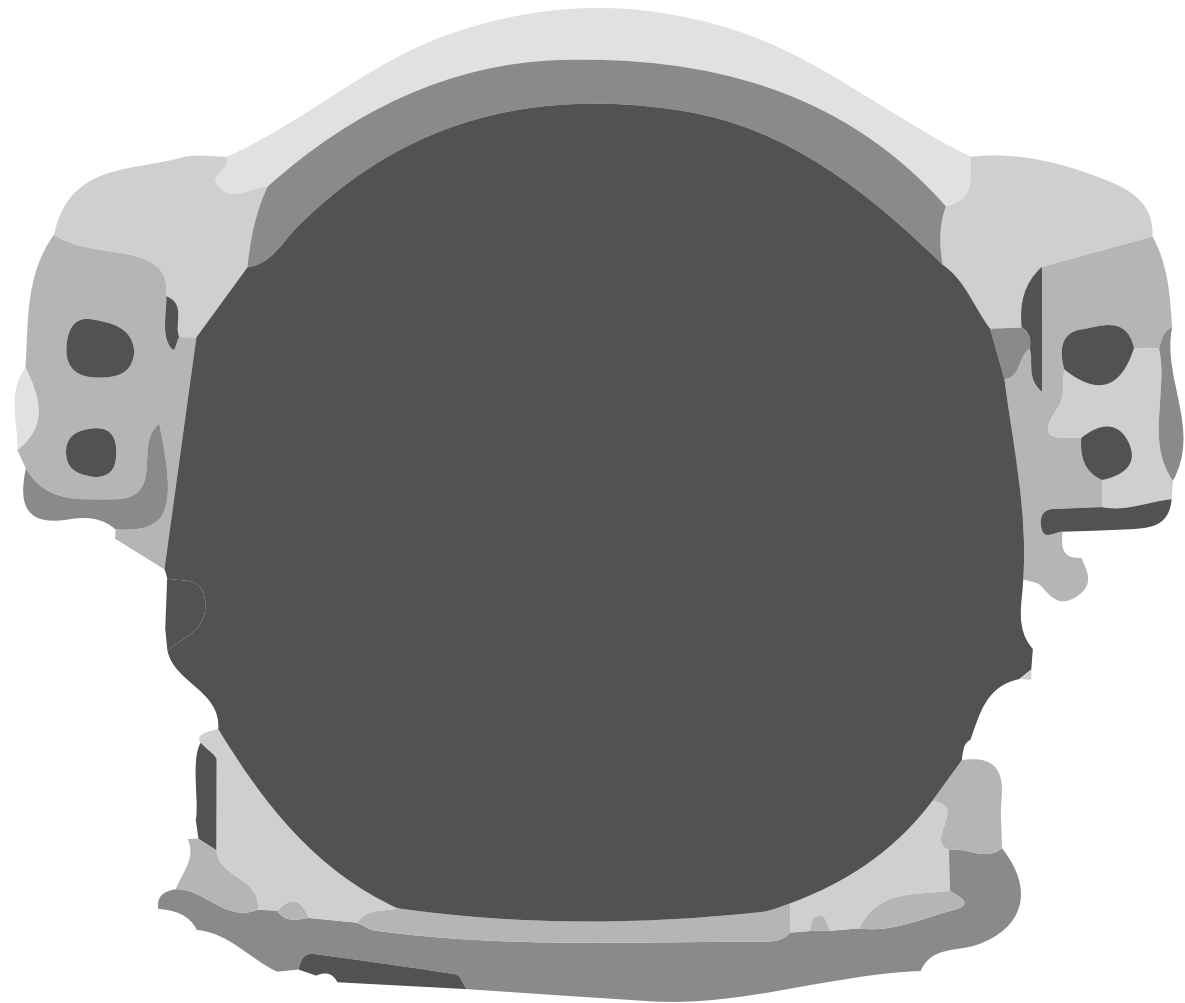

In addition to the potatoes, we have also successfully grown other crops such as lettuce, tomatoes, and radishes. Our next goal is to grow crops that require more complex nutrient cycles, such as soybeans and corn.

The data we are collecting from this research will be crucial for future missions to Mars and for understanding how to sustain human life on the planet.

A full-body photograph of a man, identified as Astronaut Mike, floating in space. He is wearing a white extravehicular activity (EVA) suit with a large, clear helmet visor that has a yellow light ring around it. He is smiling and giving a thumbs-up with both hands. The background is a deep black space filled with numerous small, bright stars. Overlaid on the left side of the image is the text "THIS IS ASTRONAUT MIKE." in large, white, bold, sans-serif capital letters. Below this, in a smaller, white, italicized font, is the phrase "Boy oh boy! Mike rules!". In the bottom left corner, there is a small white icon consisting of a triangle with a diagonal line through it.

Green Earth Movement

Green Earth

The Green Earth Movement was an anti-capitalist environmental movement that aimed to address the immense ecological crisis by challenging the escapist Martian ideology. The movement advocated for the preservation of the Earth's environment and believed that the colonization of Mars was not compatible with environmental sustainability.

The Green Earth Movement sought to create an equitable future where the needs of planet Earth and the people were given priority over the interests of those in power. The movement challenged the power of corporations and governments that prioritize personal gain over environmental protection.

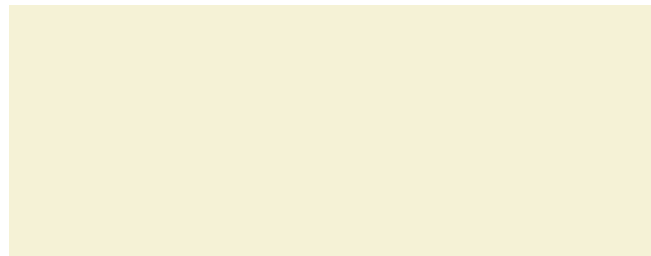

The Green Earth Movement envisioned a global community that fostered sustainability, where ecosystems are protected, and human needs are met in a way that values all life on Earth.

Green Earth

Design Summary

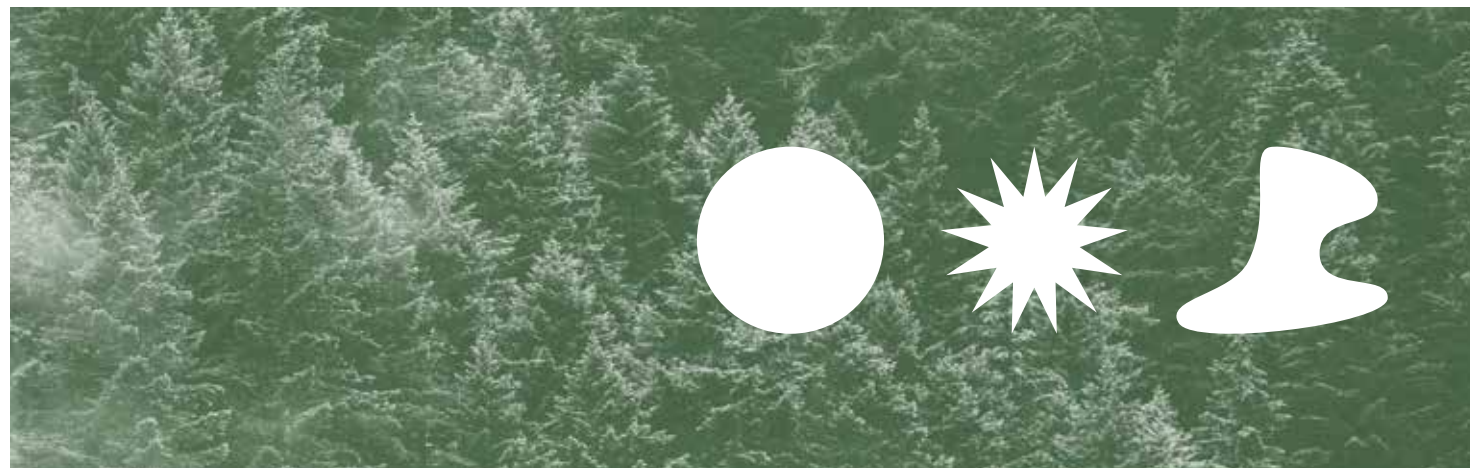

Manifont Grotesk

Konstant Grotesk

Æ A I N F

Green Earth's design identity is bold, organic, and modern. Its dominant colors are deep greens, beiges, and browns, creating an identifiably earthly look. Its primary typefaces contain abnormal qualities and are meant to stand out. Its imagery involves primarily images of Earth and nature, making use of monochromatic color and striking text to grab the viewer's attention.

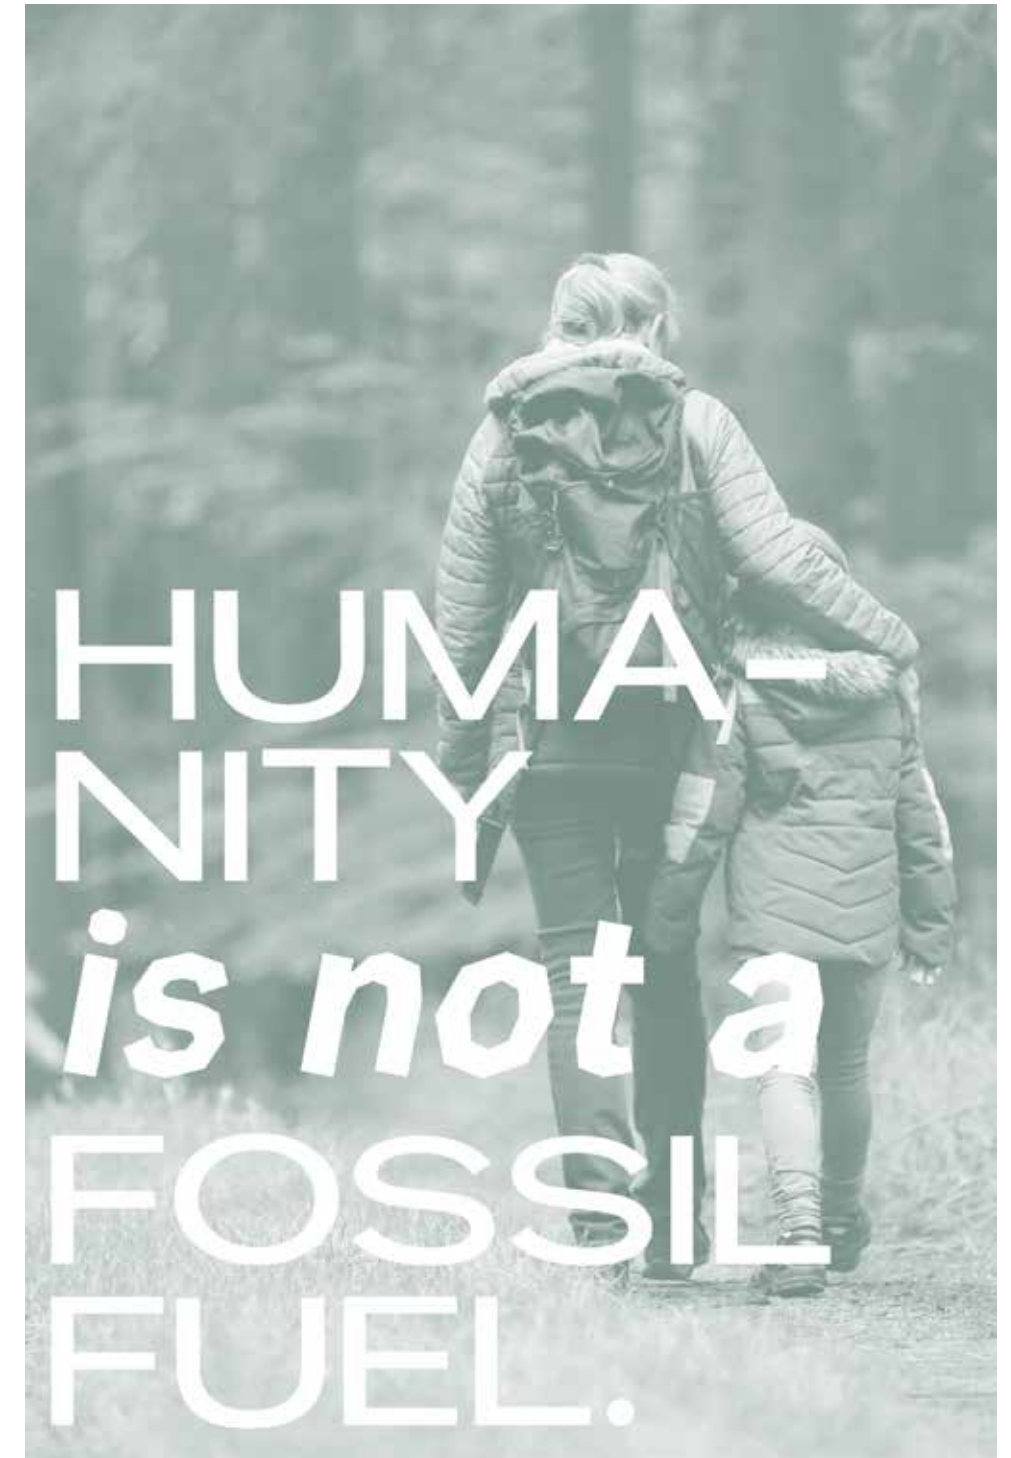

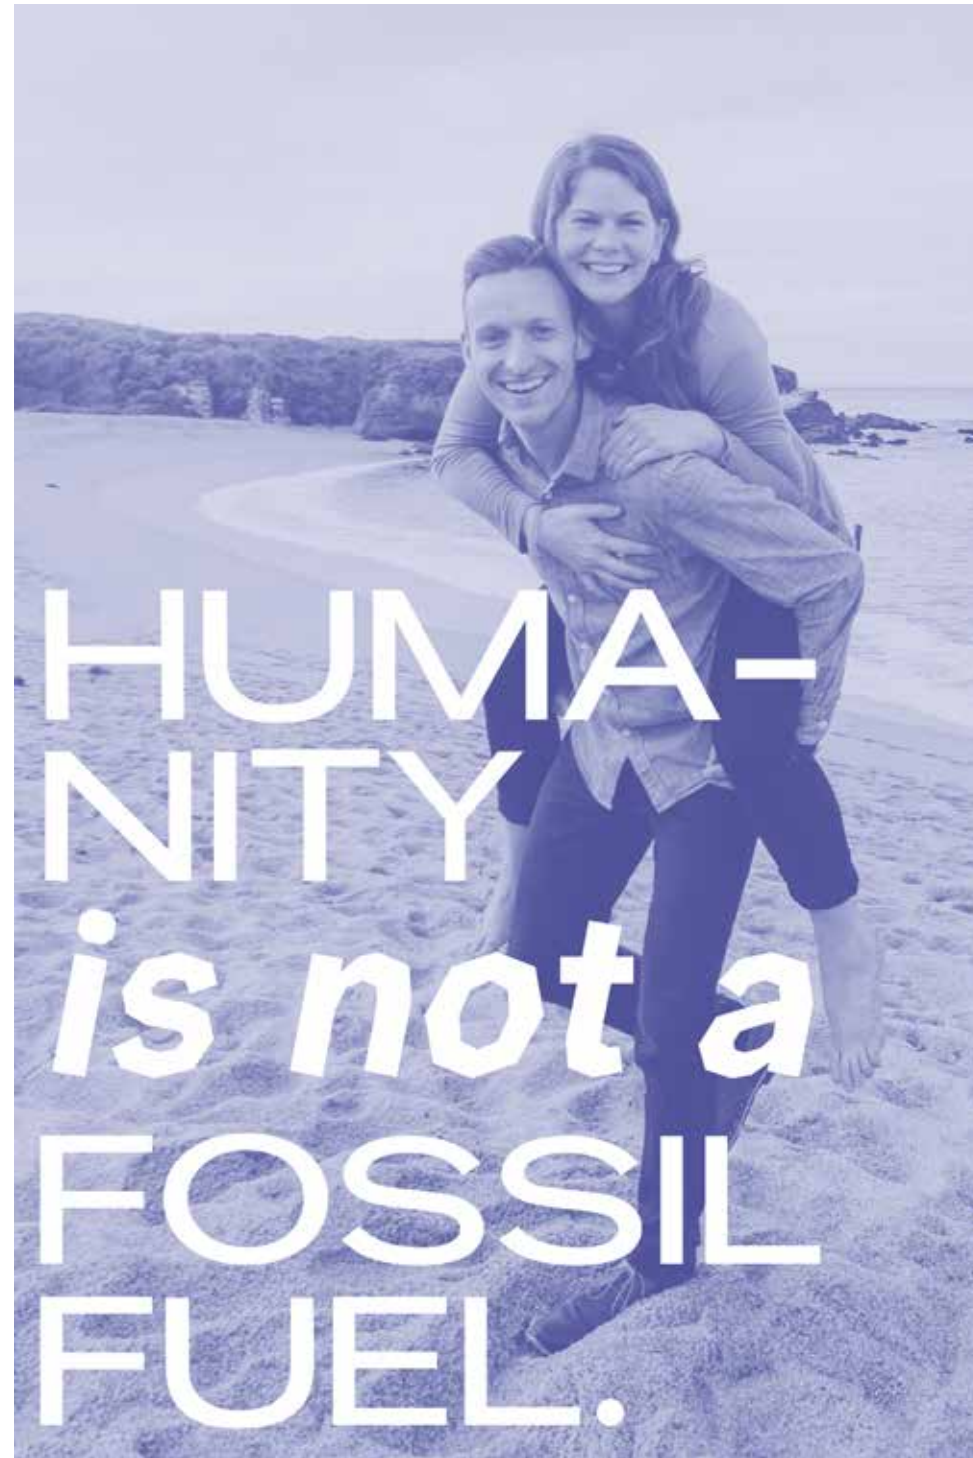

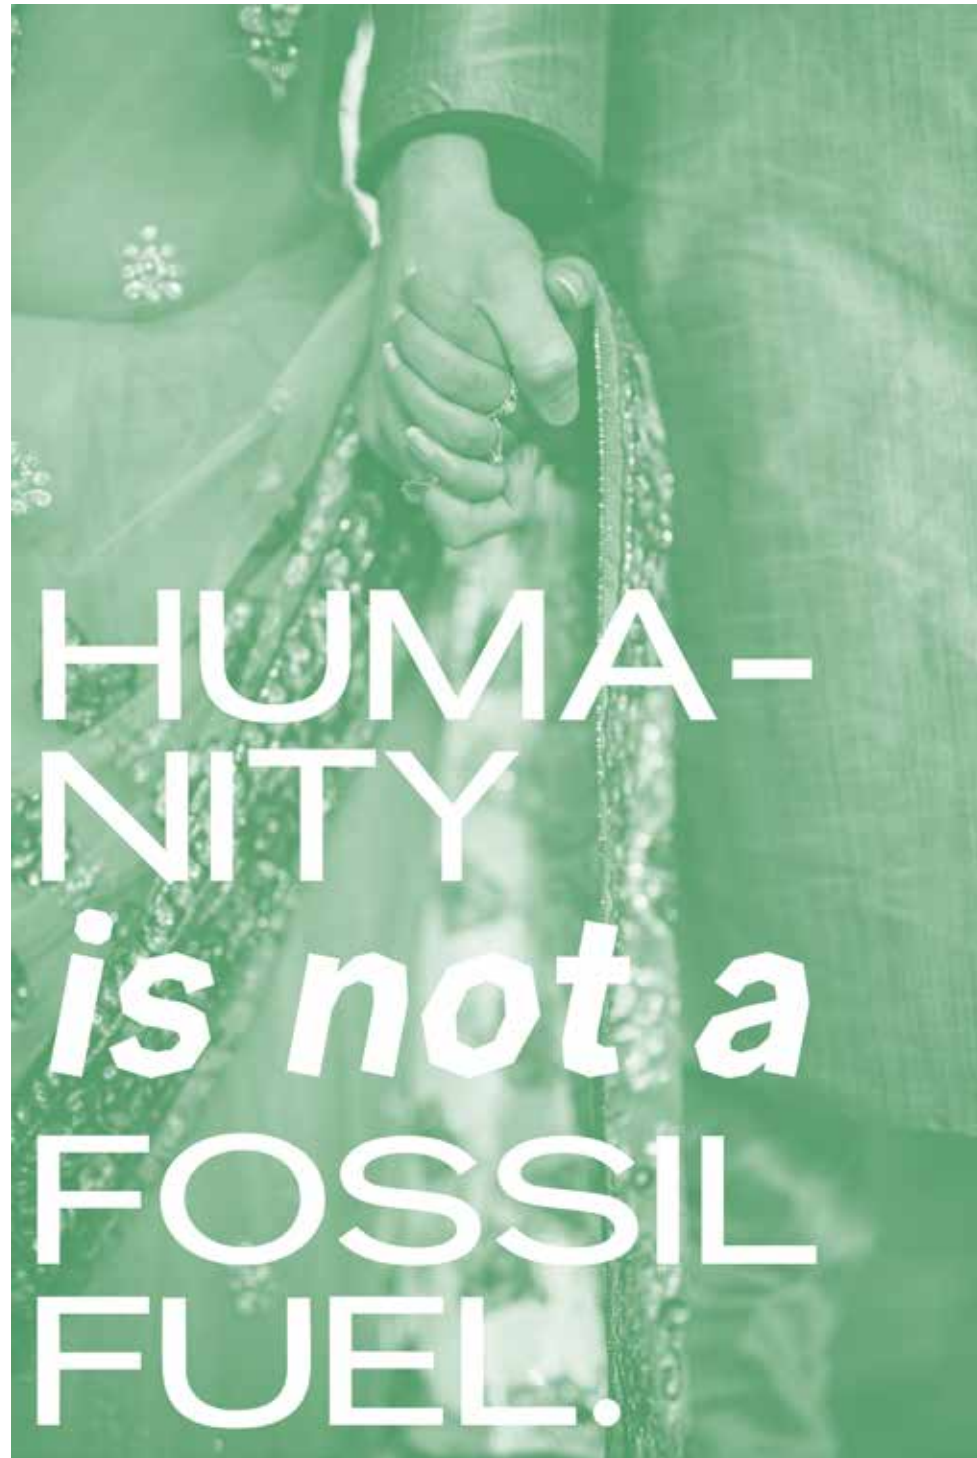

Green Earth's Values

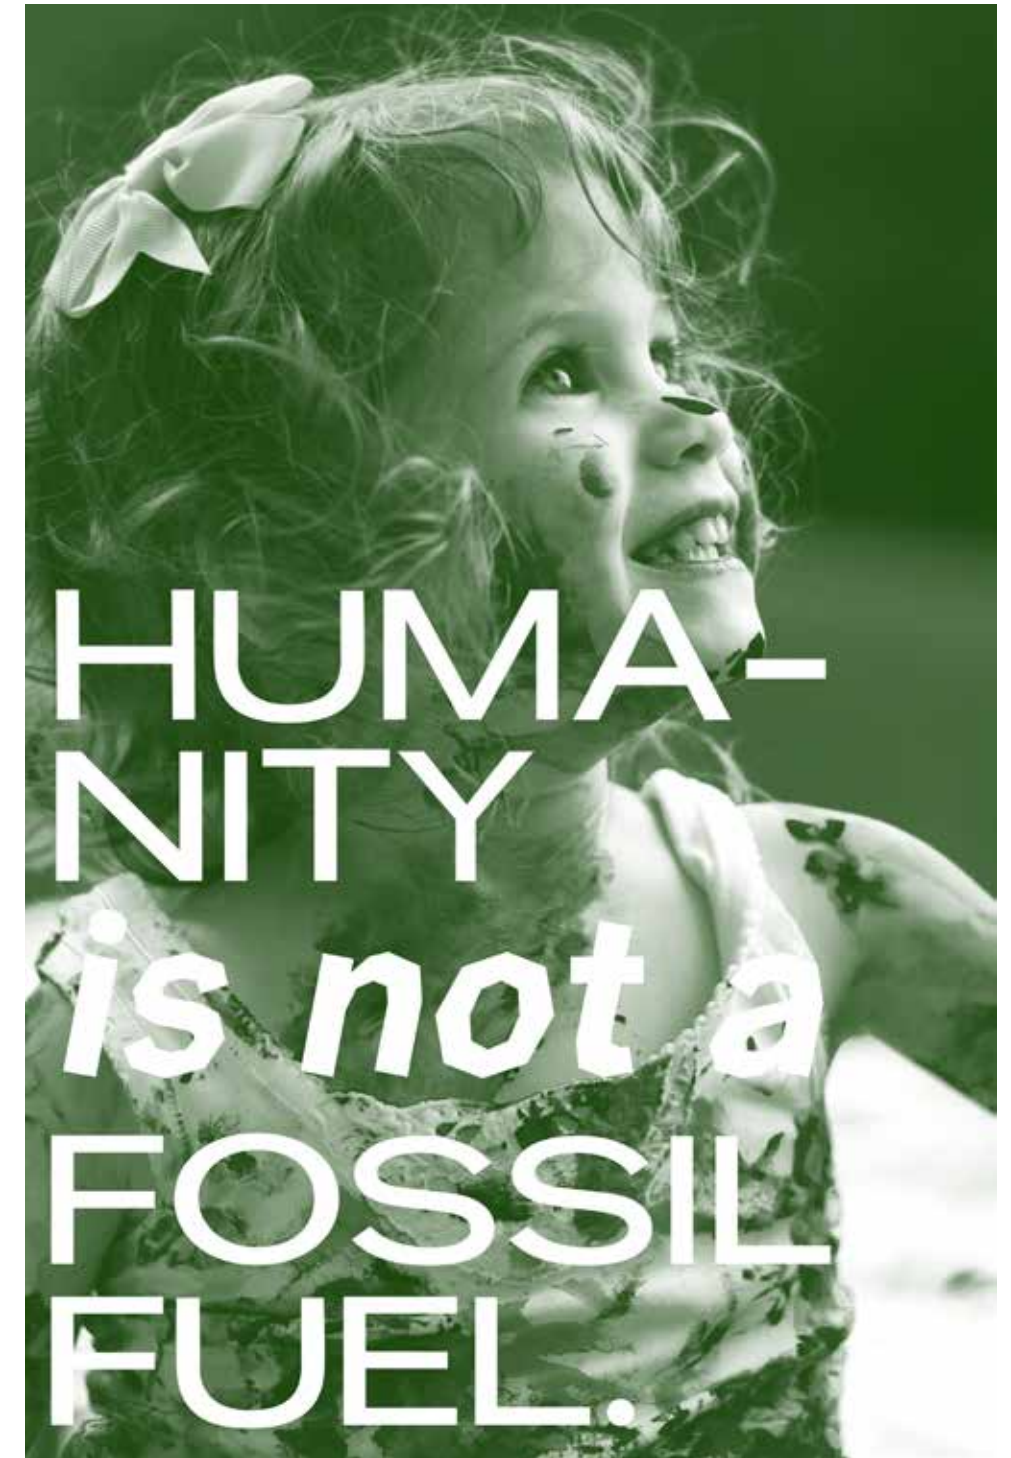

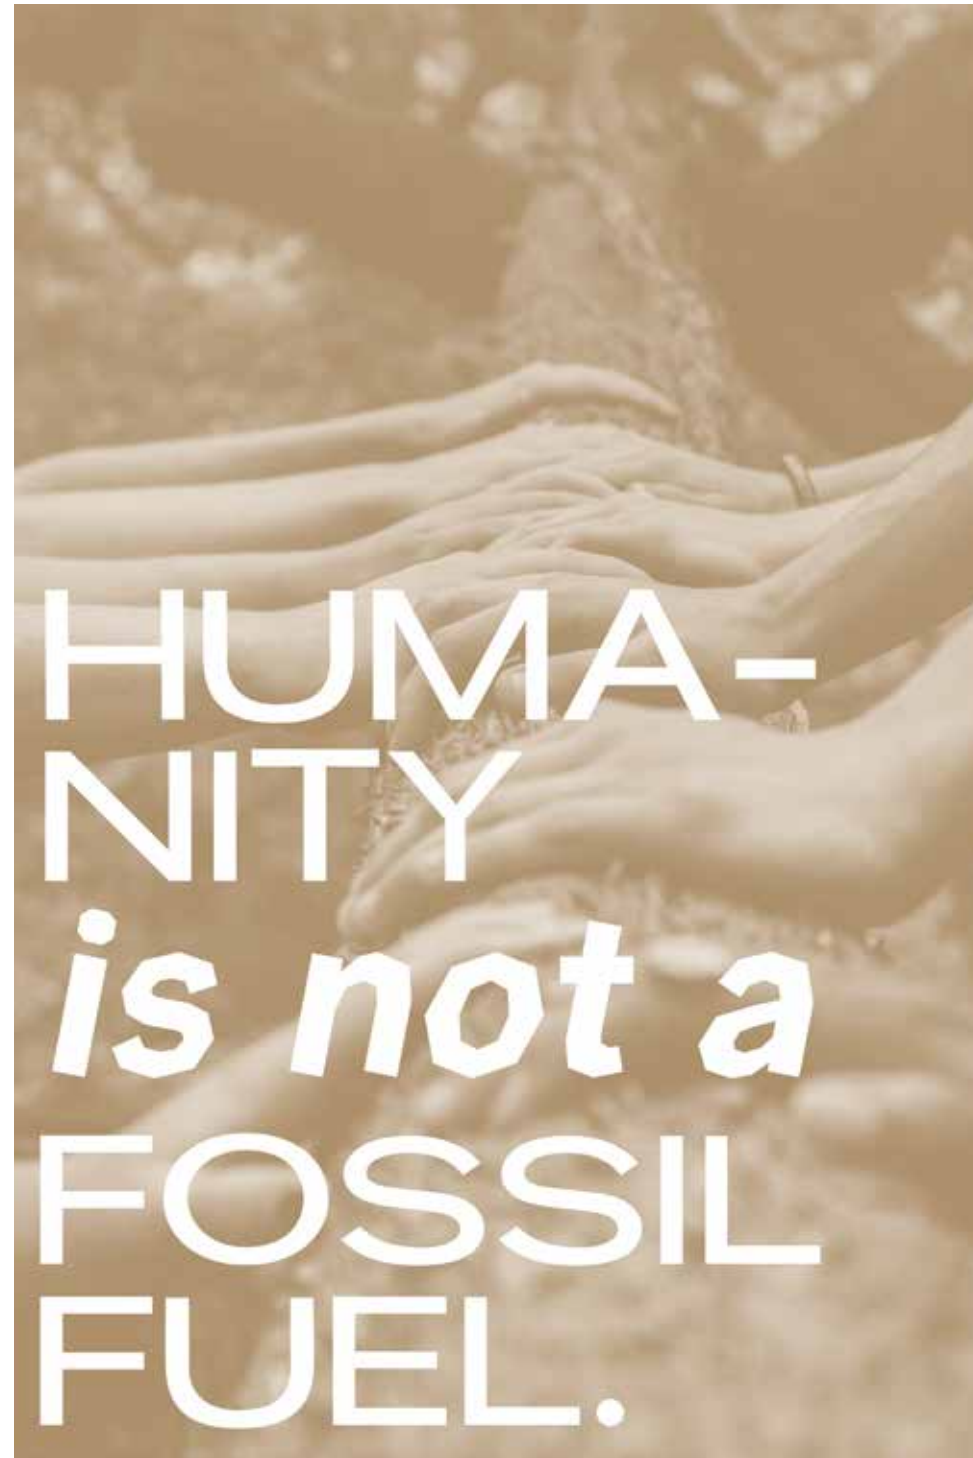

- 1 The migration to Mars is destroying our earth.
- 2 Humanity is responsible for protecting all life on Earth.
- 3 Our governments need to put an end to climate change.
- 4 We can still reverse climate change. it is not too late.
- 5 Collective action is the best way to fight for our future.
- 6 No human being is more valuable than any other.
- 7 Reversing climate change requires change on both the systemic and the individual level.
- 8 We must stand together, and stand strong.

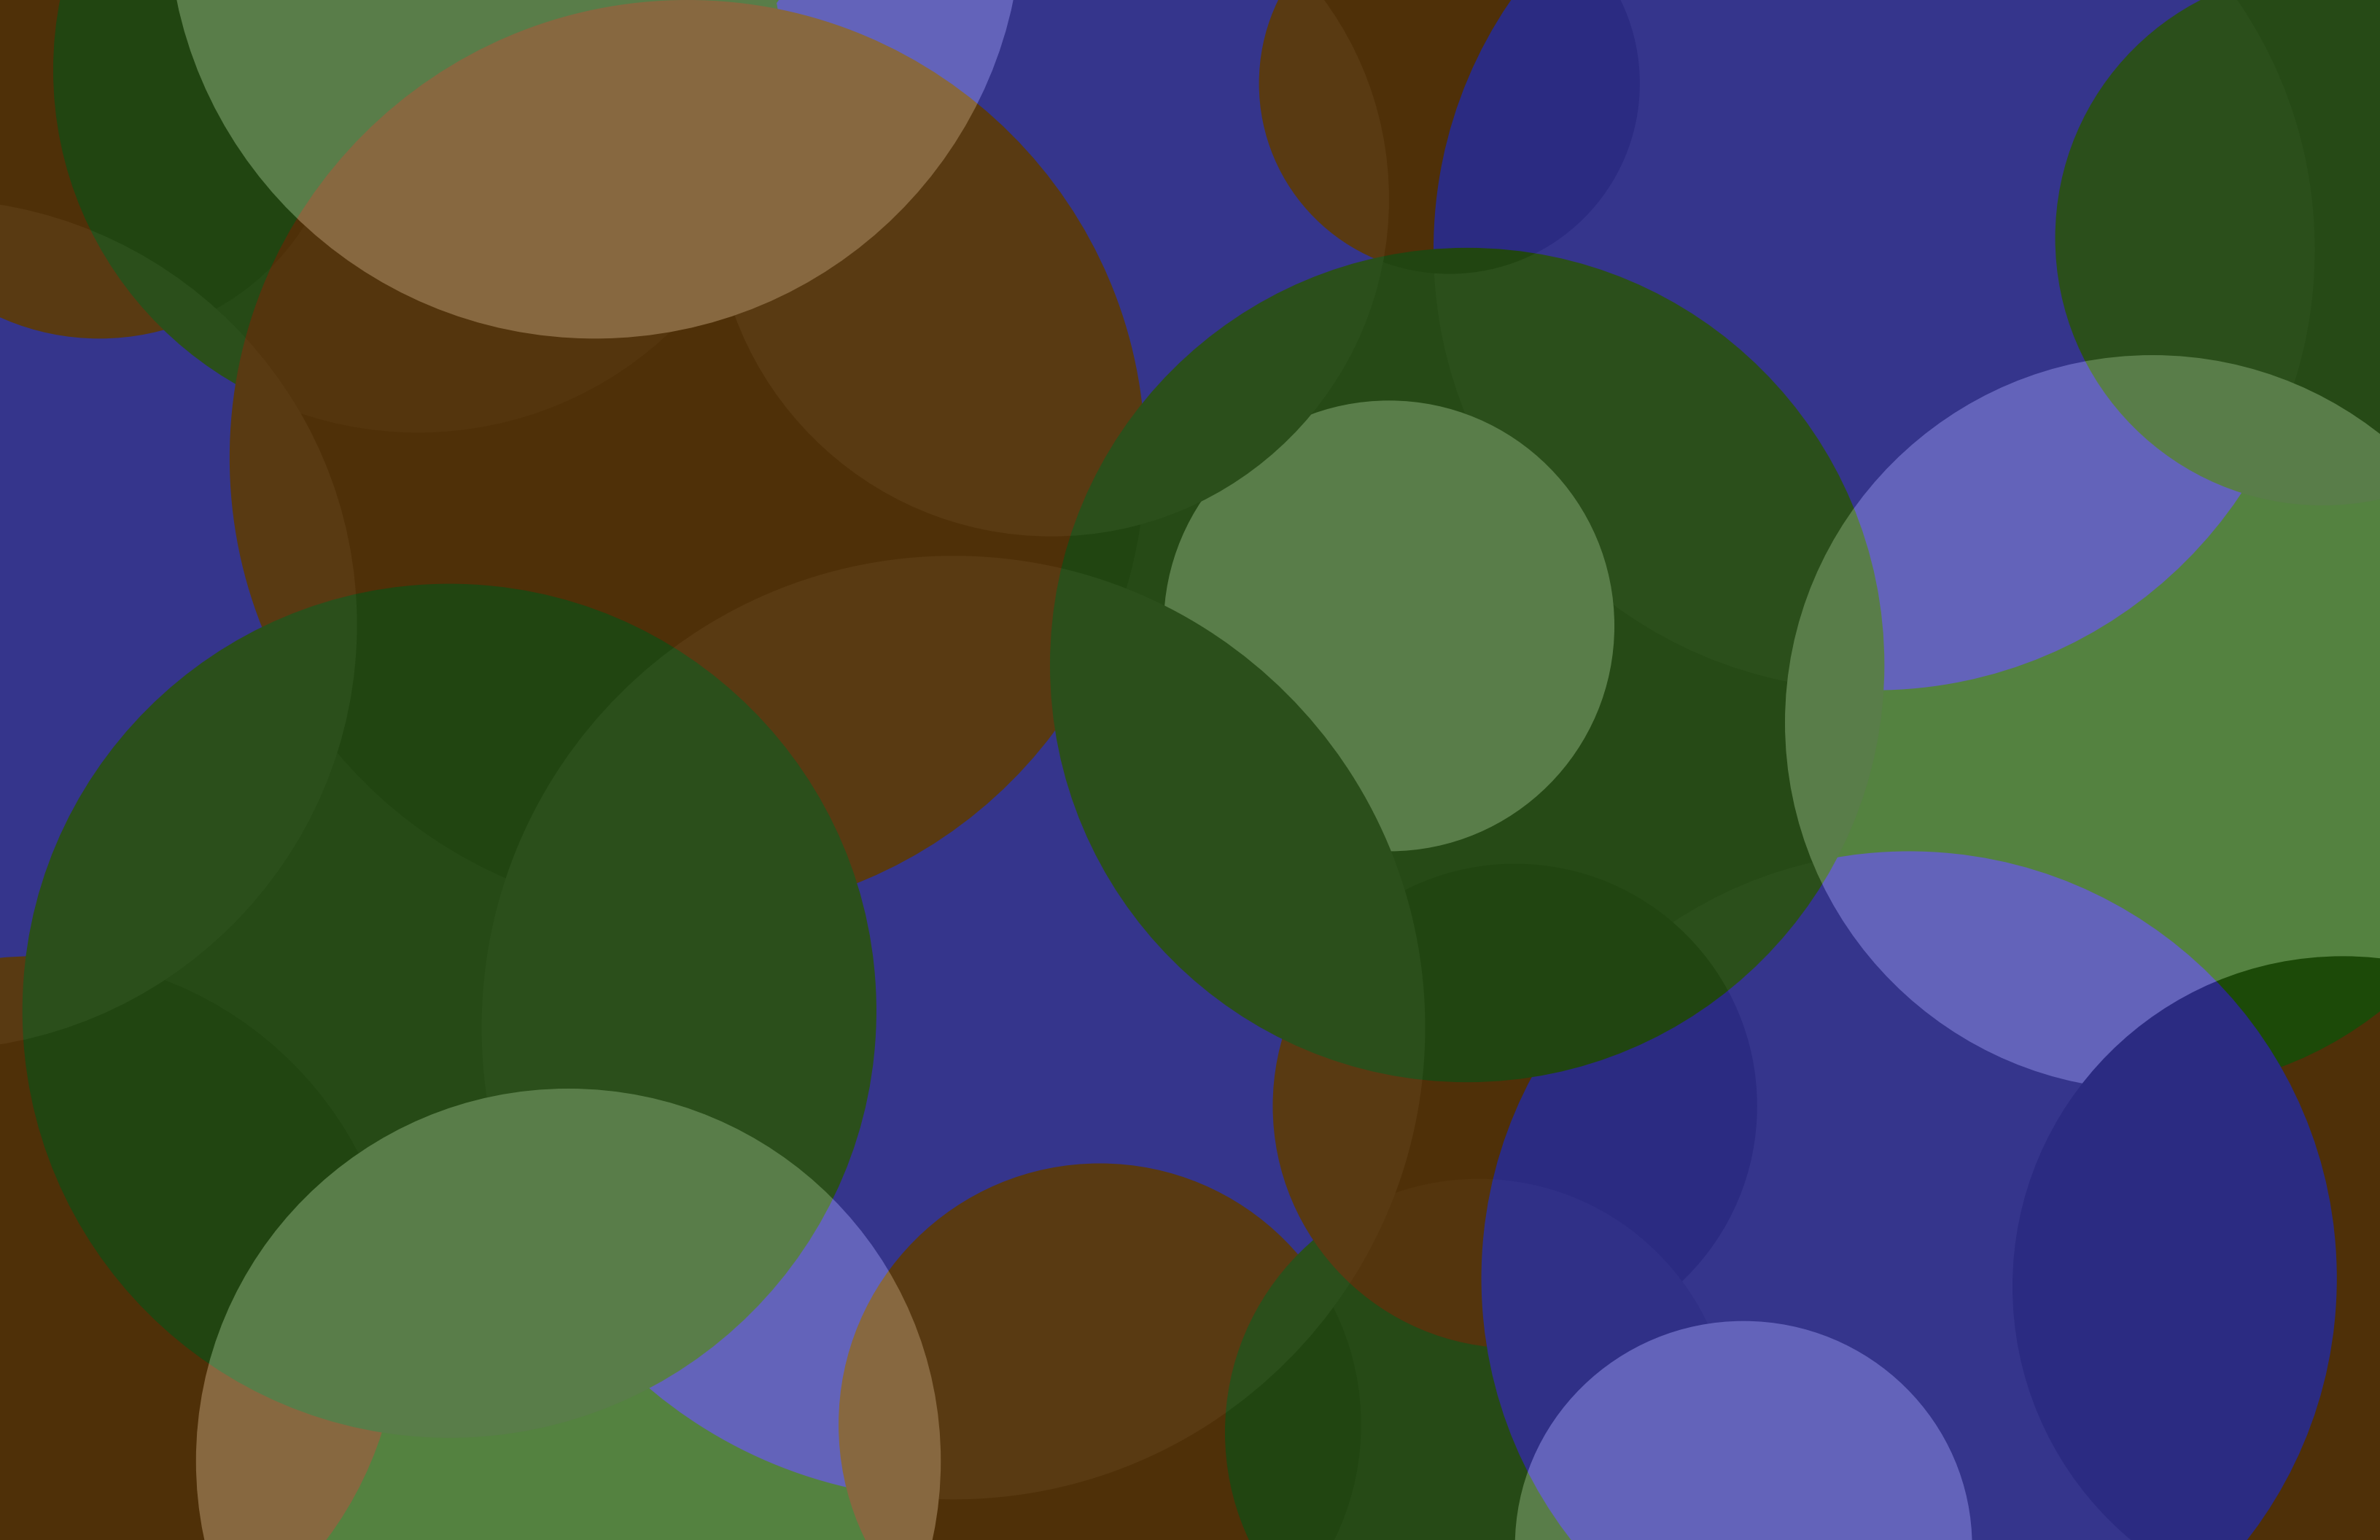

THE KING OF HEAVEN

Not Mars,
Earth.

Not Mars,
Earth.

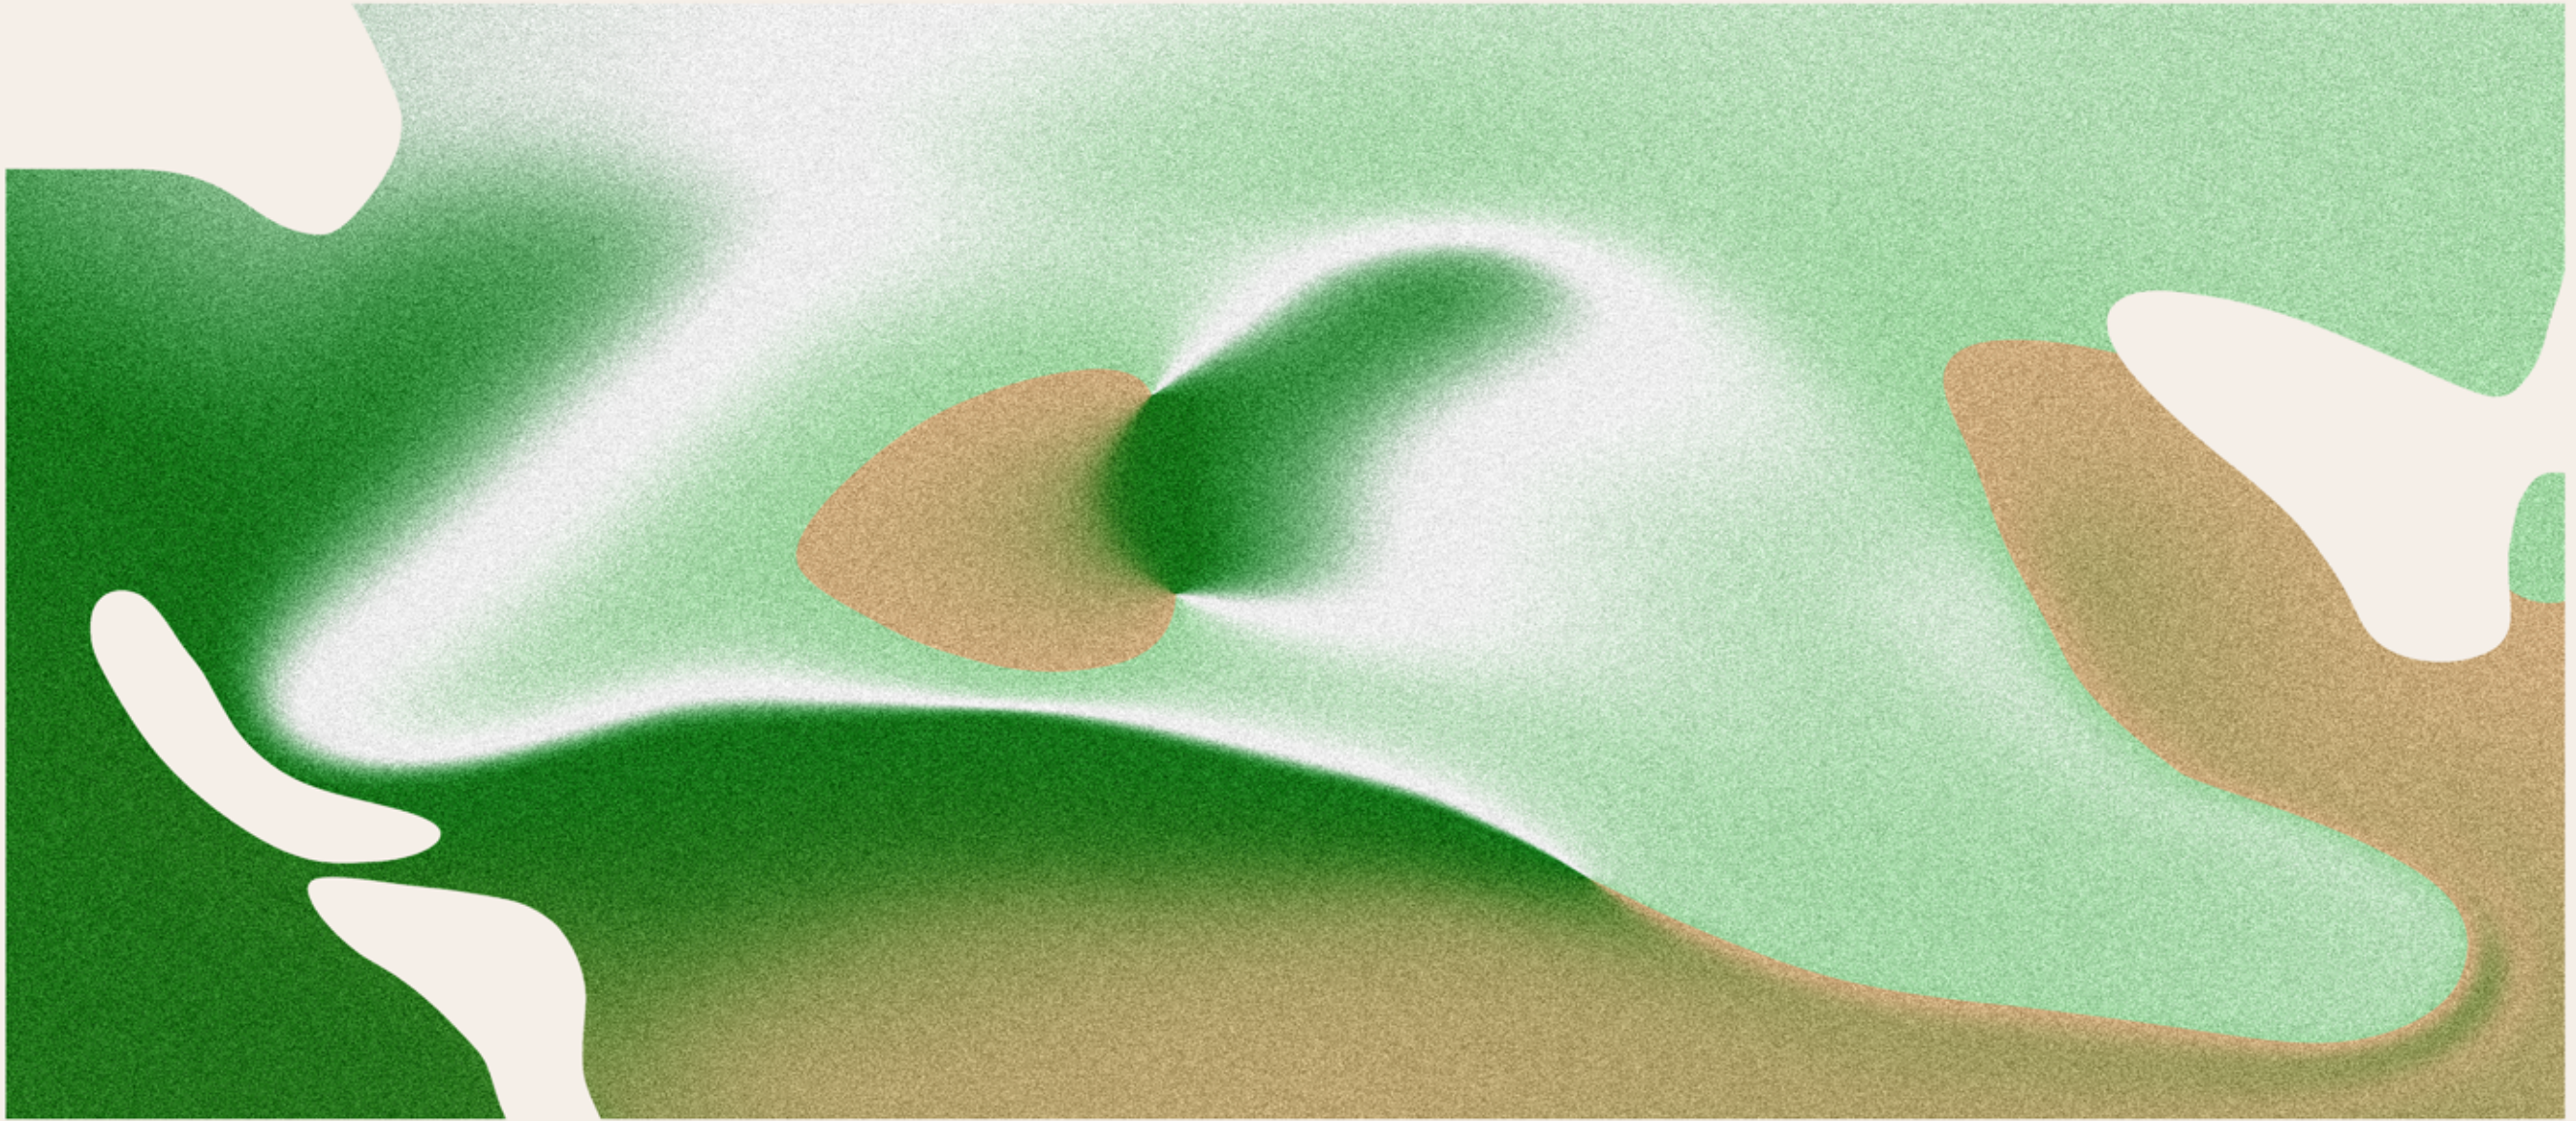

Not Mars,
Earth.

Not Mars,
Earth.

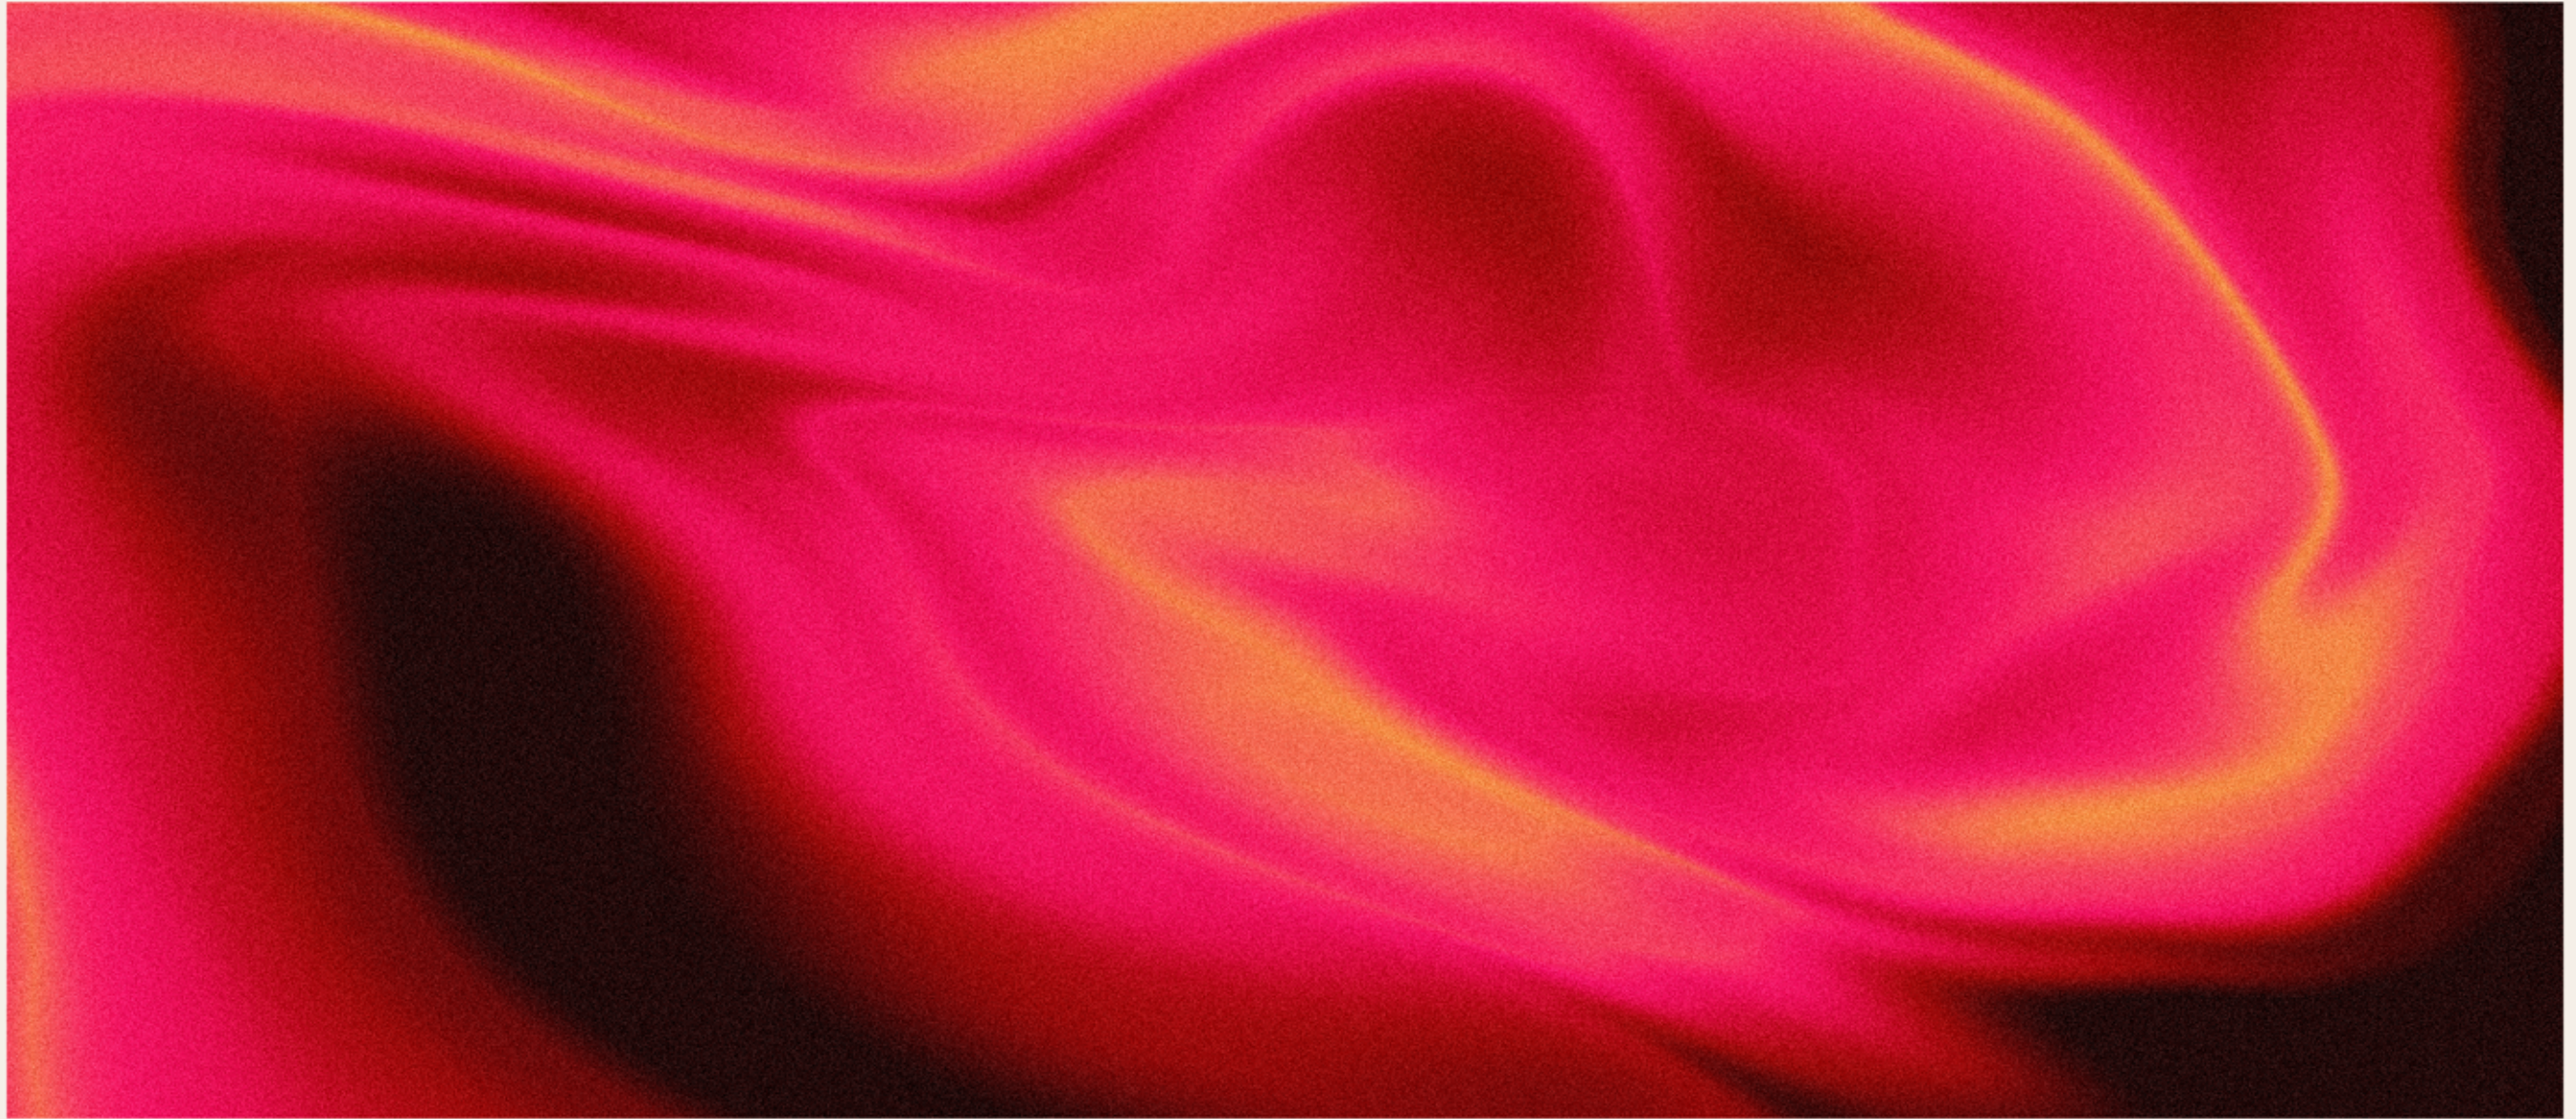

Why does our water _____
look like this? _____

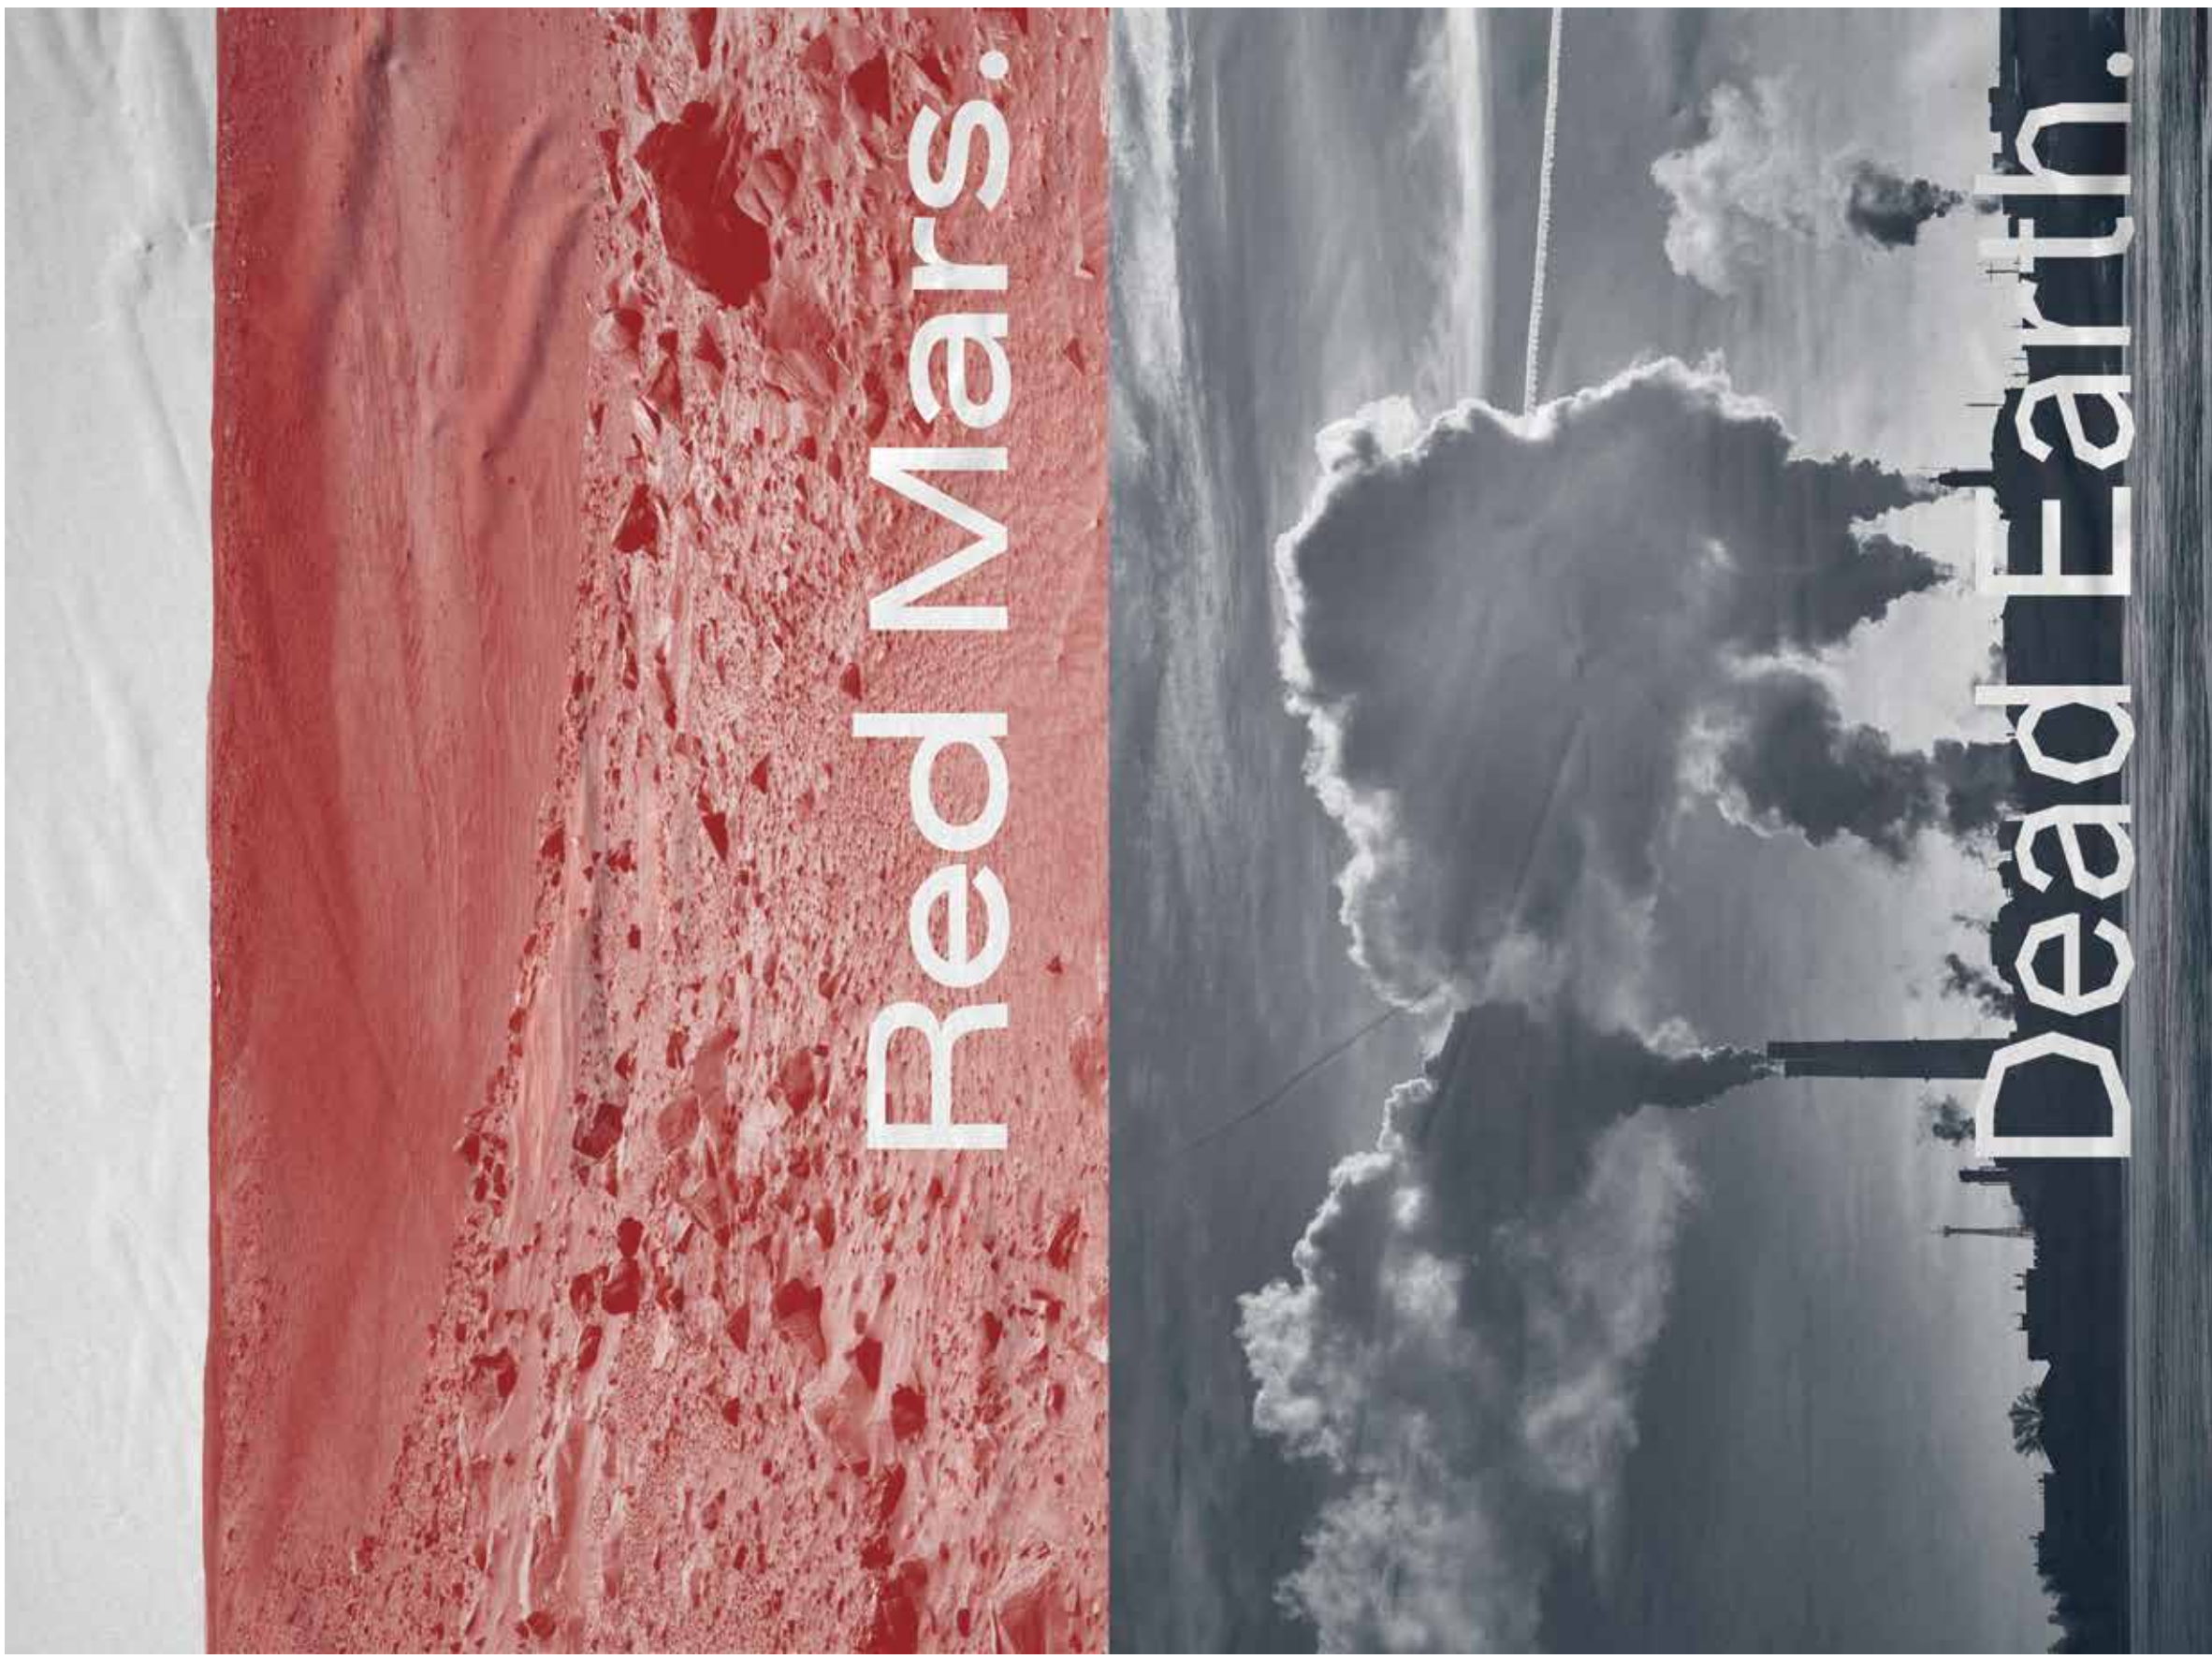

Why does our air _____
look like this? _____

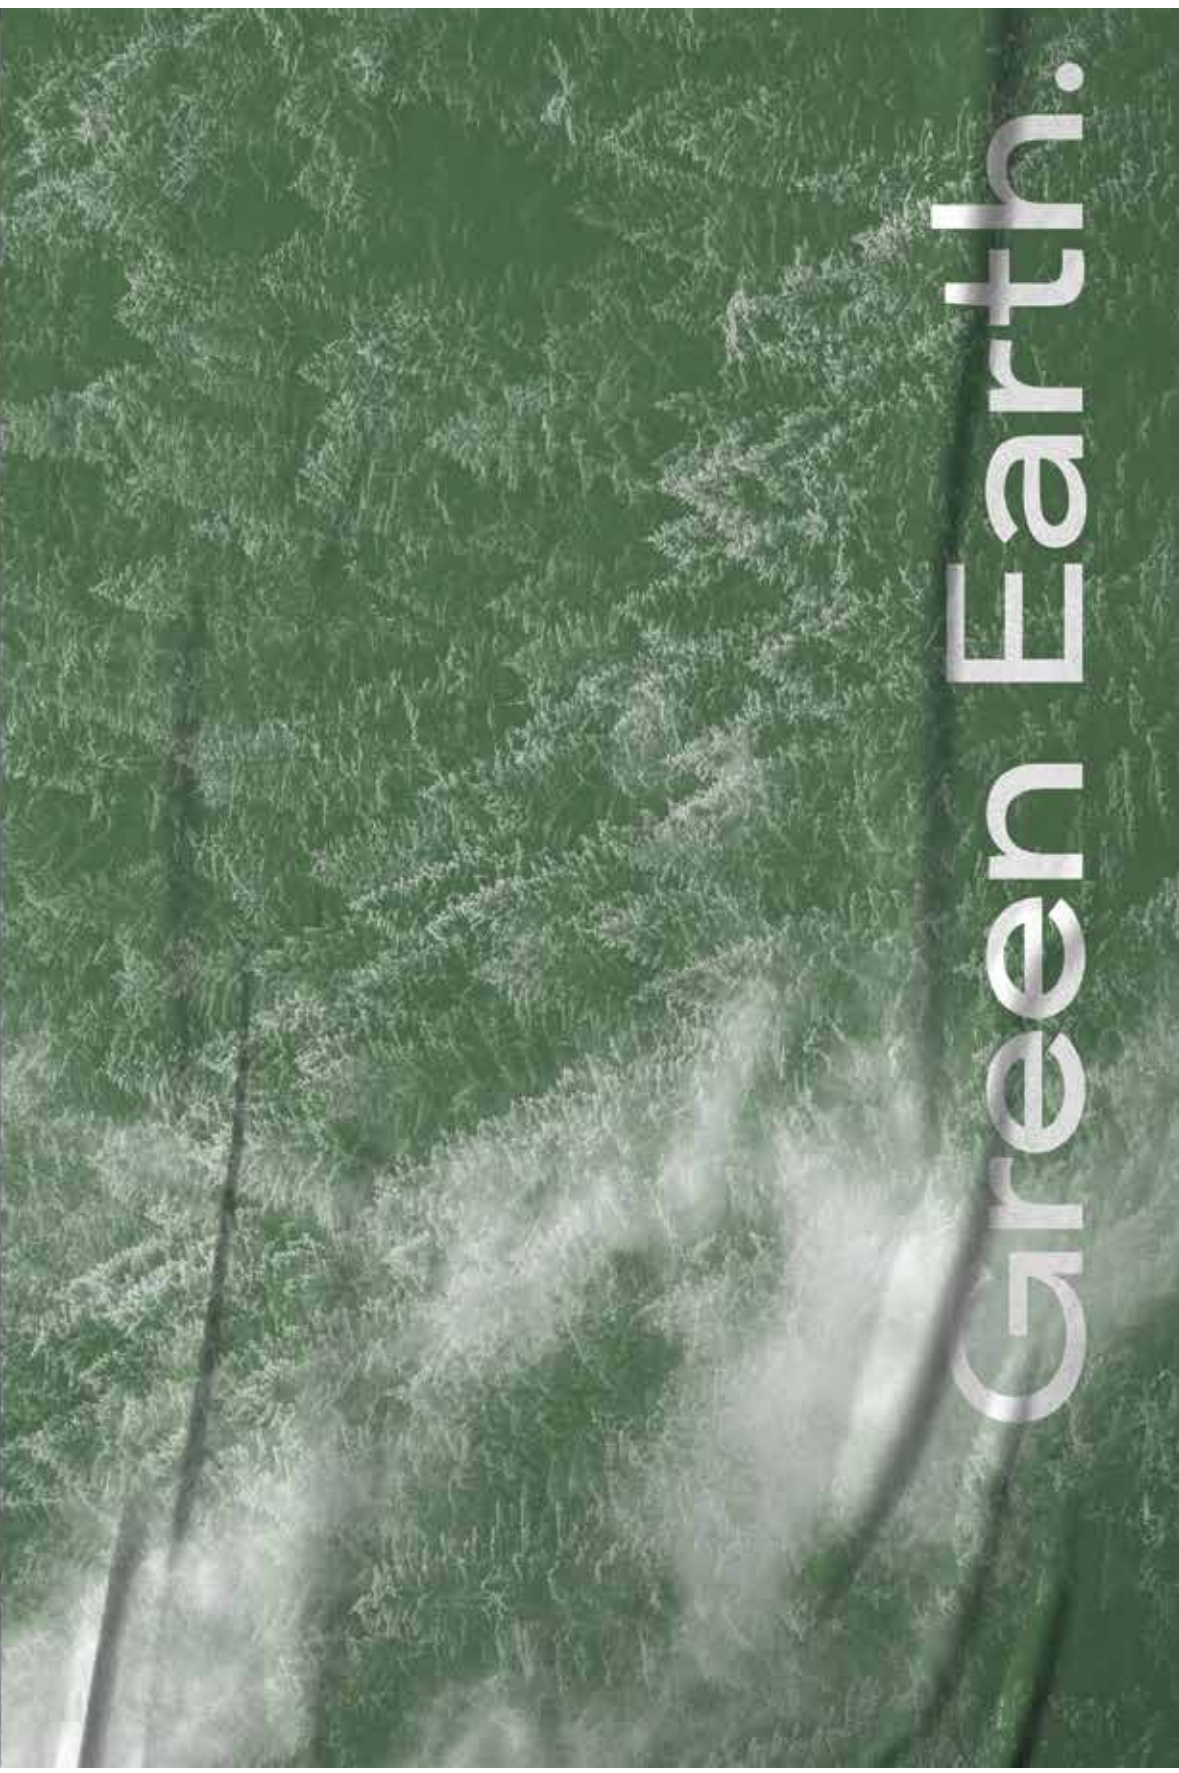

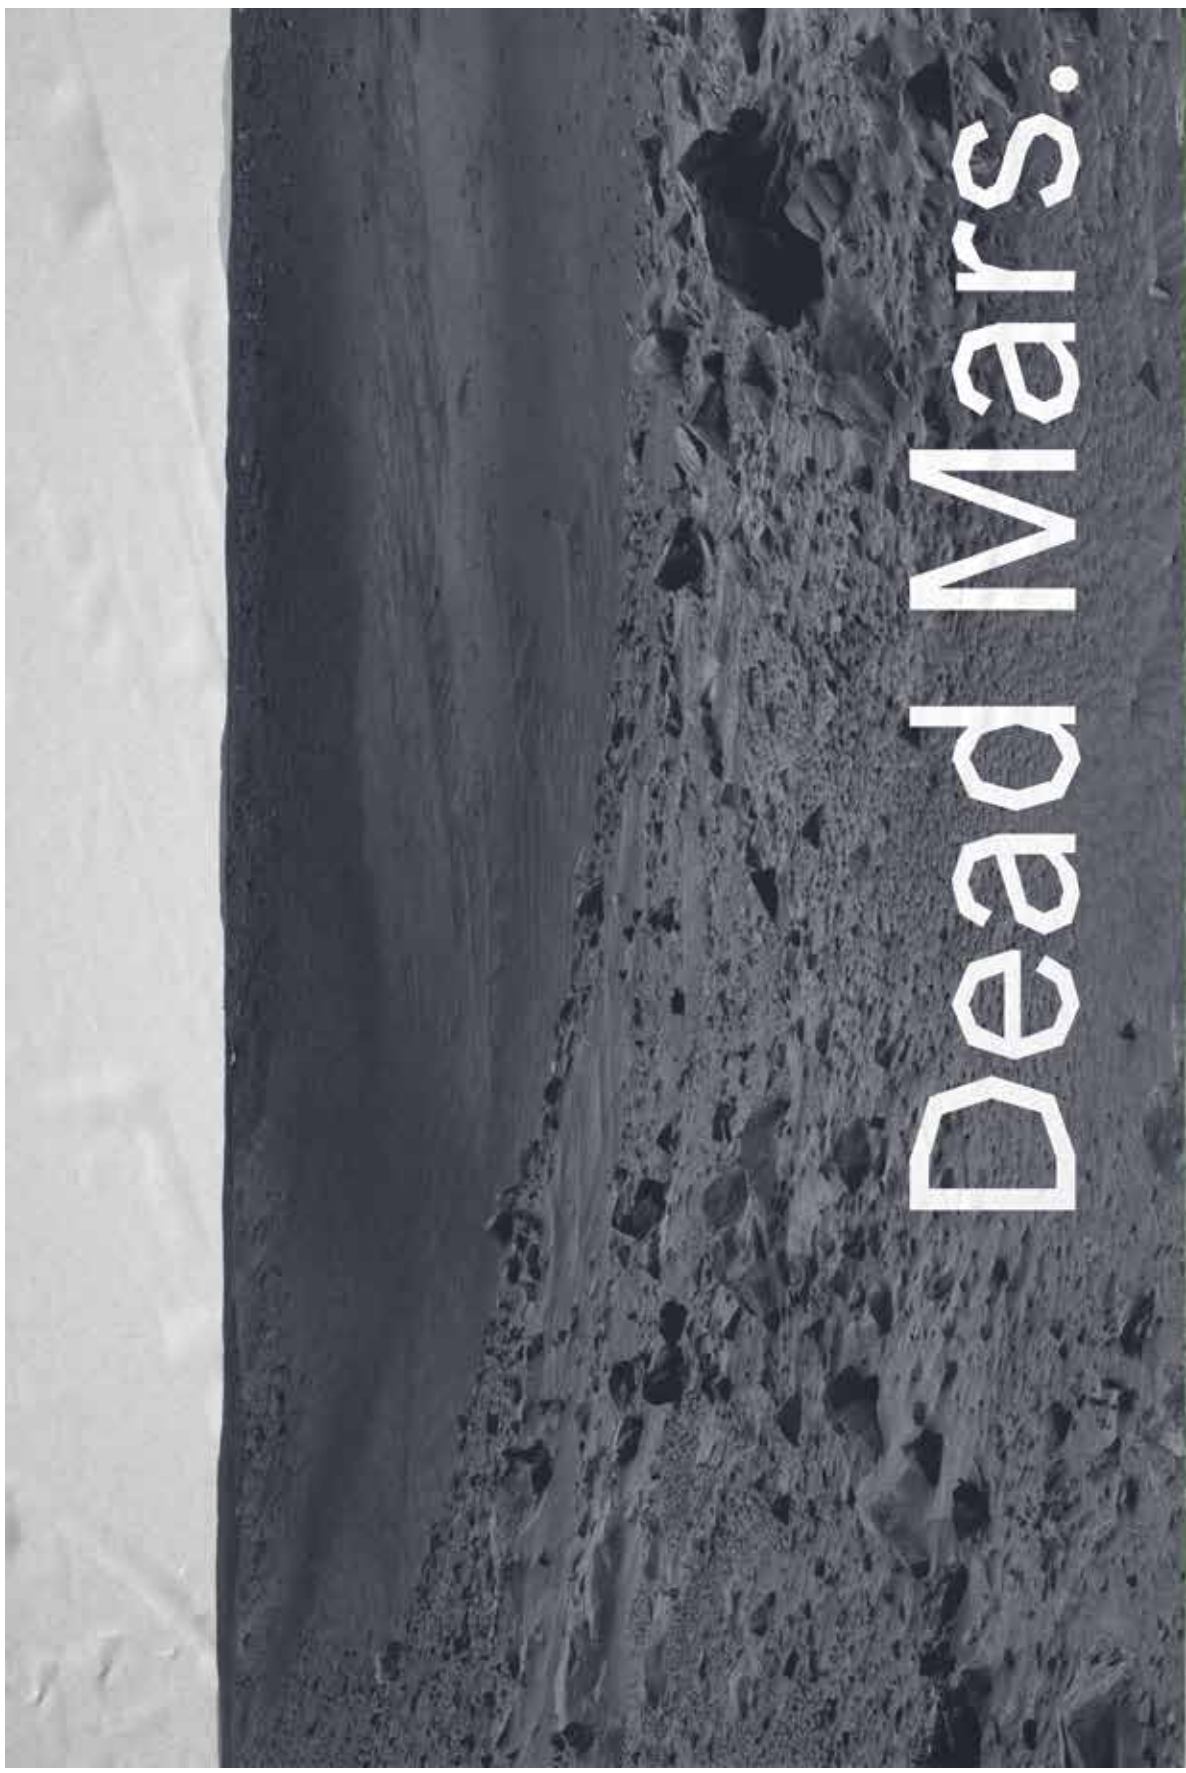

Why do our forests _____
look like this? _____

We need nature.
Nature need us.

We are proud of our continued commitment to the ~~conservation~~^{destruction} of Earth and sustainability practices. As a company, we recognize the importance of responsible stewardship of our planet and the need to protect its natural resources for ~~future generations~~^{the rich and powerful.}

We believe that the exploration and colonization of Mars can be done in an environmentally conscious way that prioritizes sustainability and conservation. To that end, we have implemented a number of practices to ~~reduce our environmental impact and promote sustainability.~~

We are committed to using ~~50%~~^{really??} renewable energy sources whenever possible. We have developed cutting-edge solar power systems that have been used to power ~~the factories destroying our oceans.~~. These systems will reduce our reliance on fossil fuels and minimize our carbon footprint.

We are also committed to reducing waste and recycling as much as possible. Our Mars exploration equipment is designed to be durable, and we are exploring ways to recycle materials on the Red Planet. We are also investigating ways to use regolith, the soil on Mars, as a building material to reduce the need for transporting construction materials from Earth.

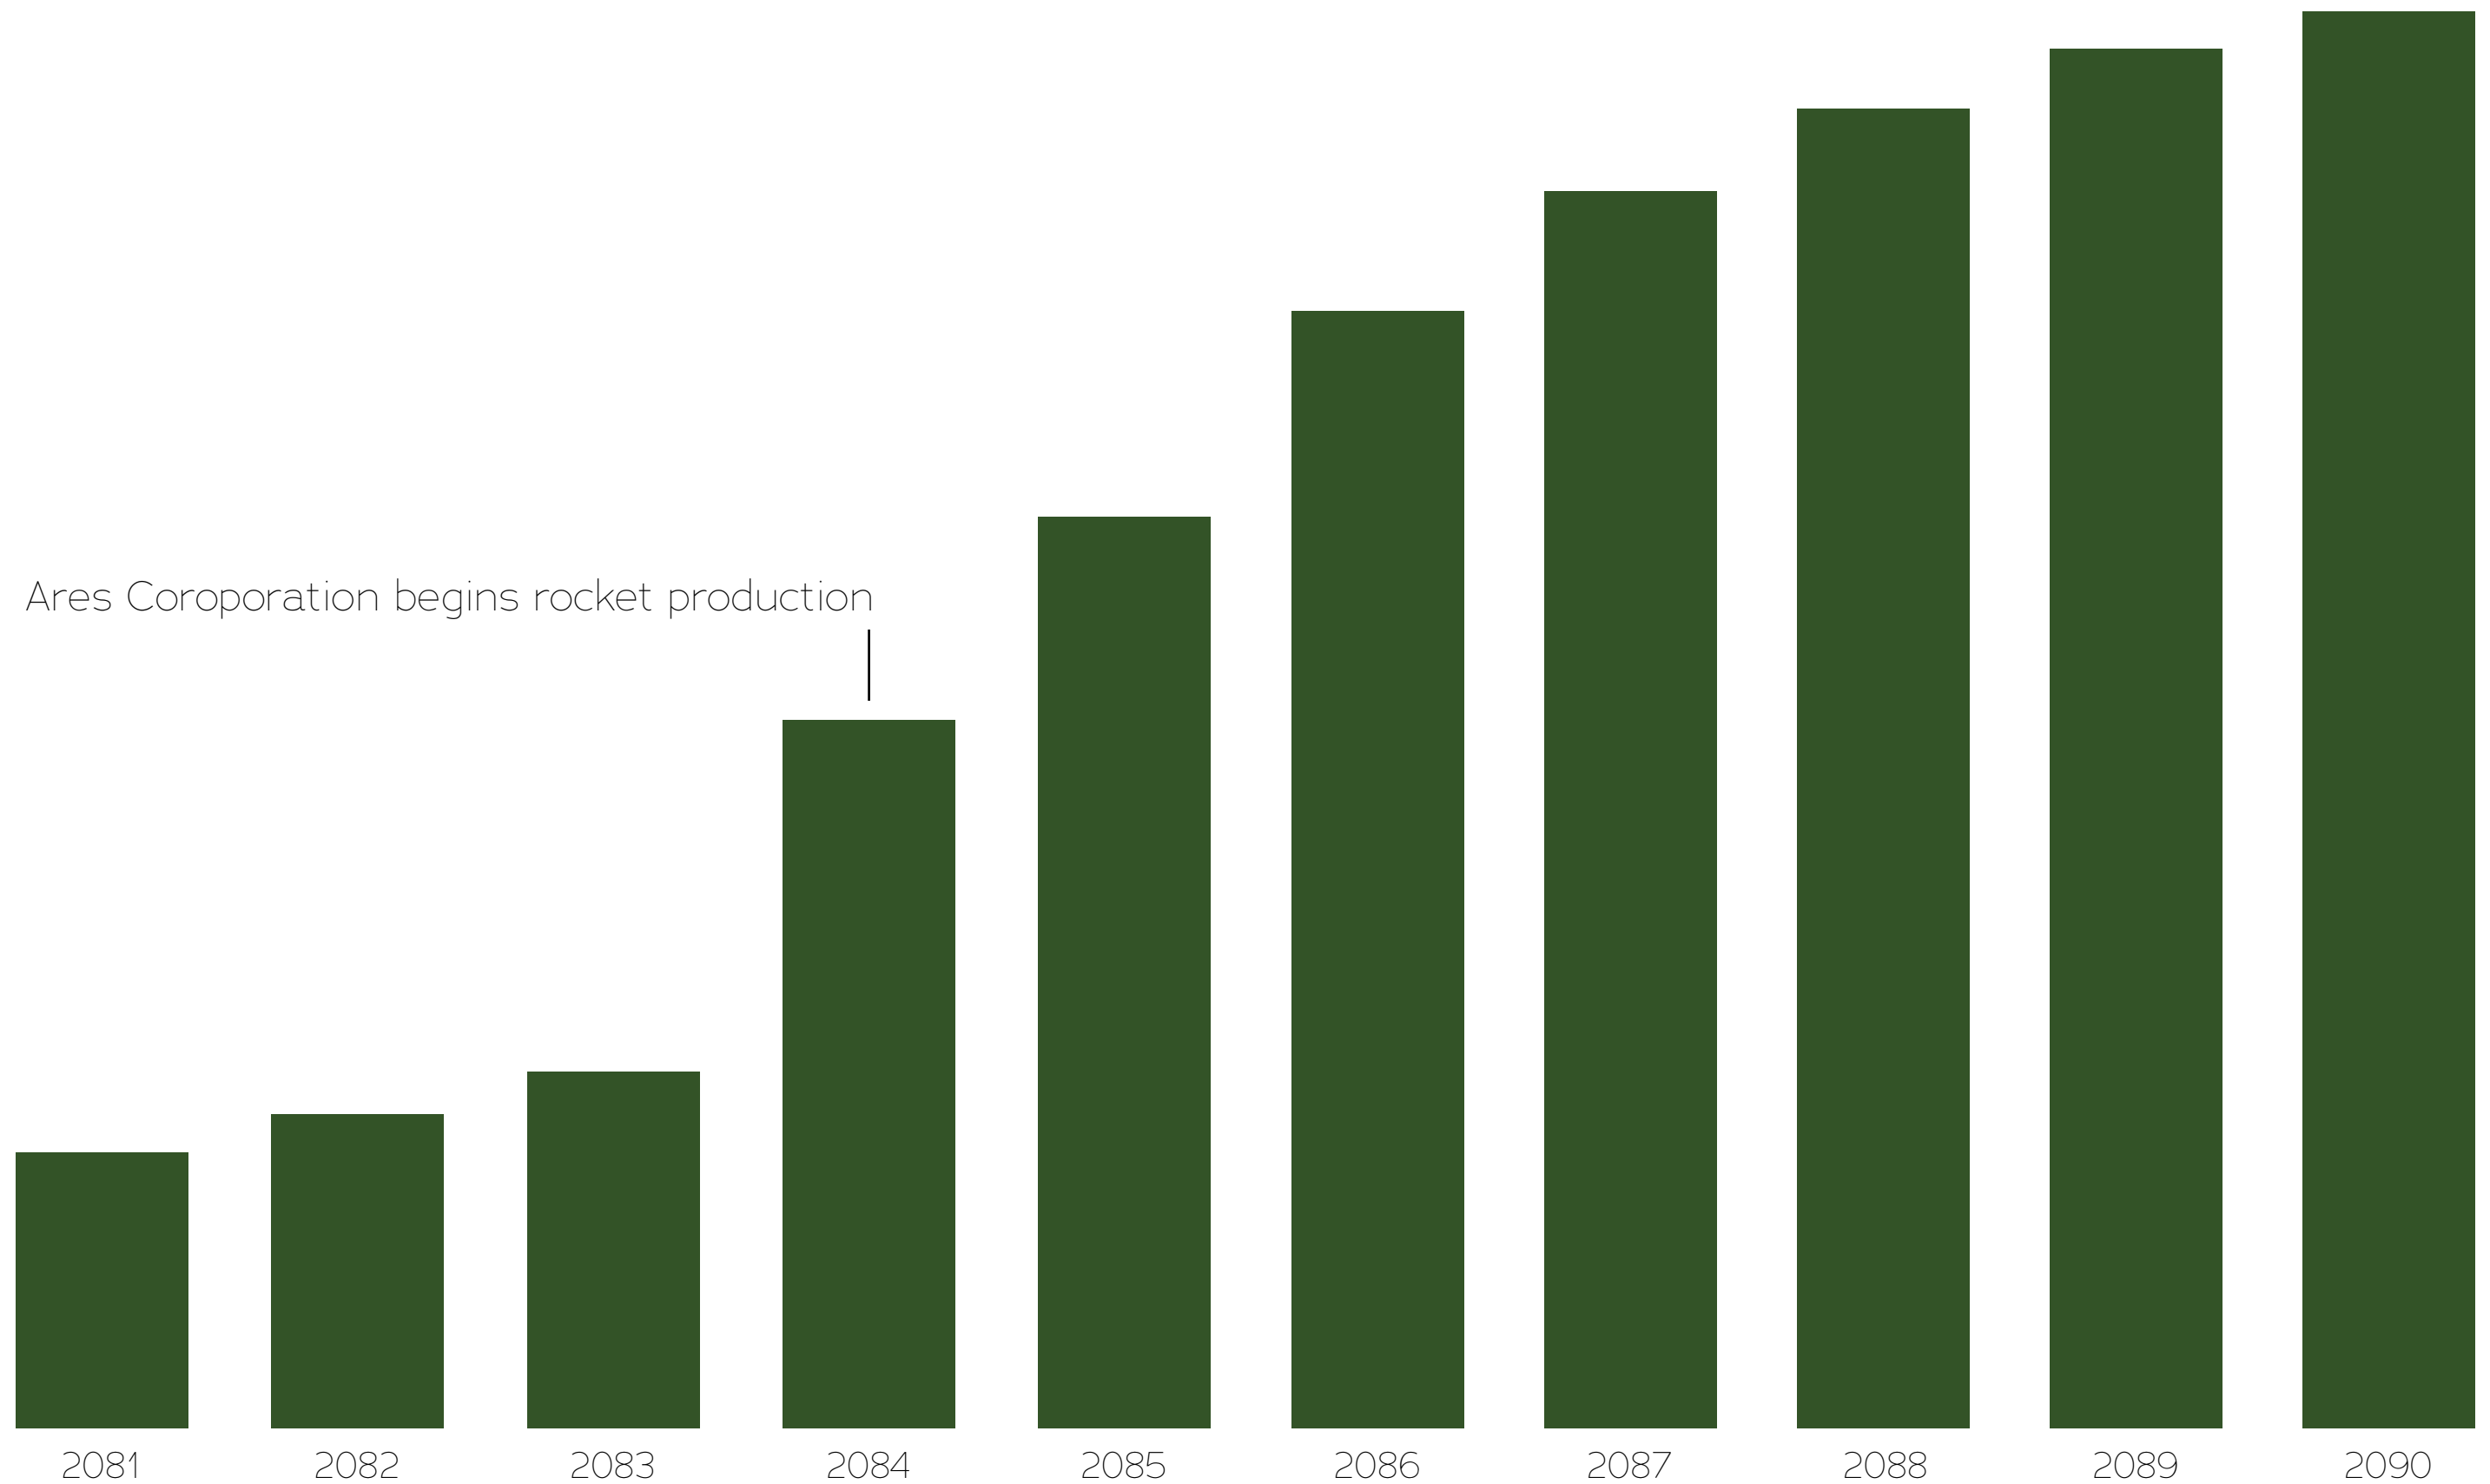

In addition, we are partnering with ~~organizations on Earth~~^{TRAITORS} to support conservation efforts and promote sustainability. We believe that the exploration of Mars can inspire people to think more deeply about the importance of protecting our planet and preserving its natural resources.^{???}

~~We remain dedicated to responsible stewardship of our planet and the conservation of its resources. We will continue to promote sustainability and protect our planet for future generations.~~

**MARS IS NOT
OUR PLANET B.**

Why do our forests
look like this? _____

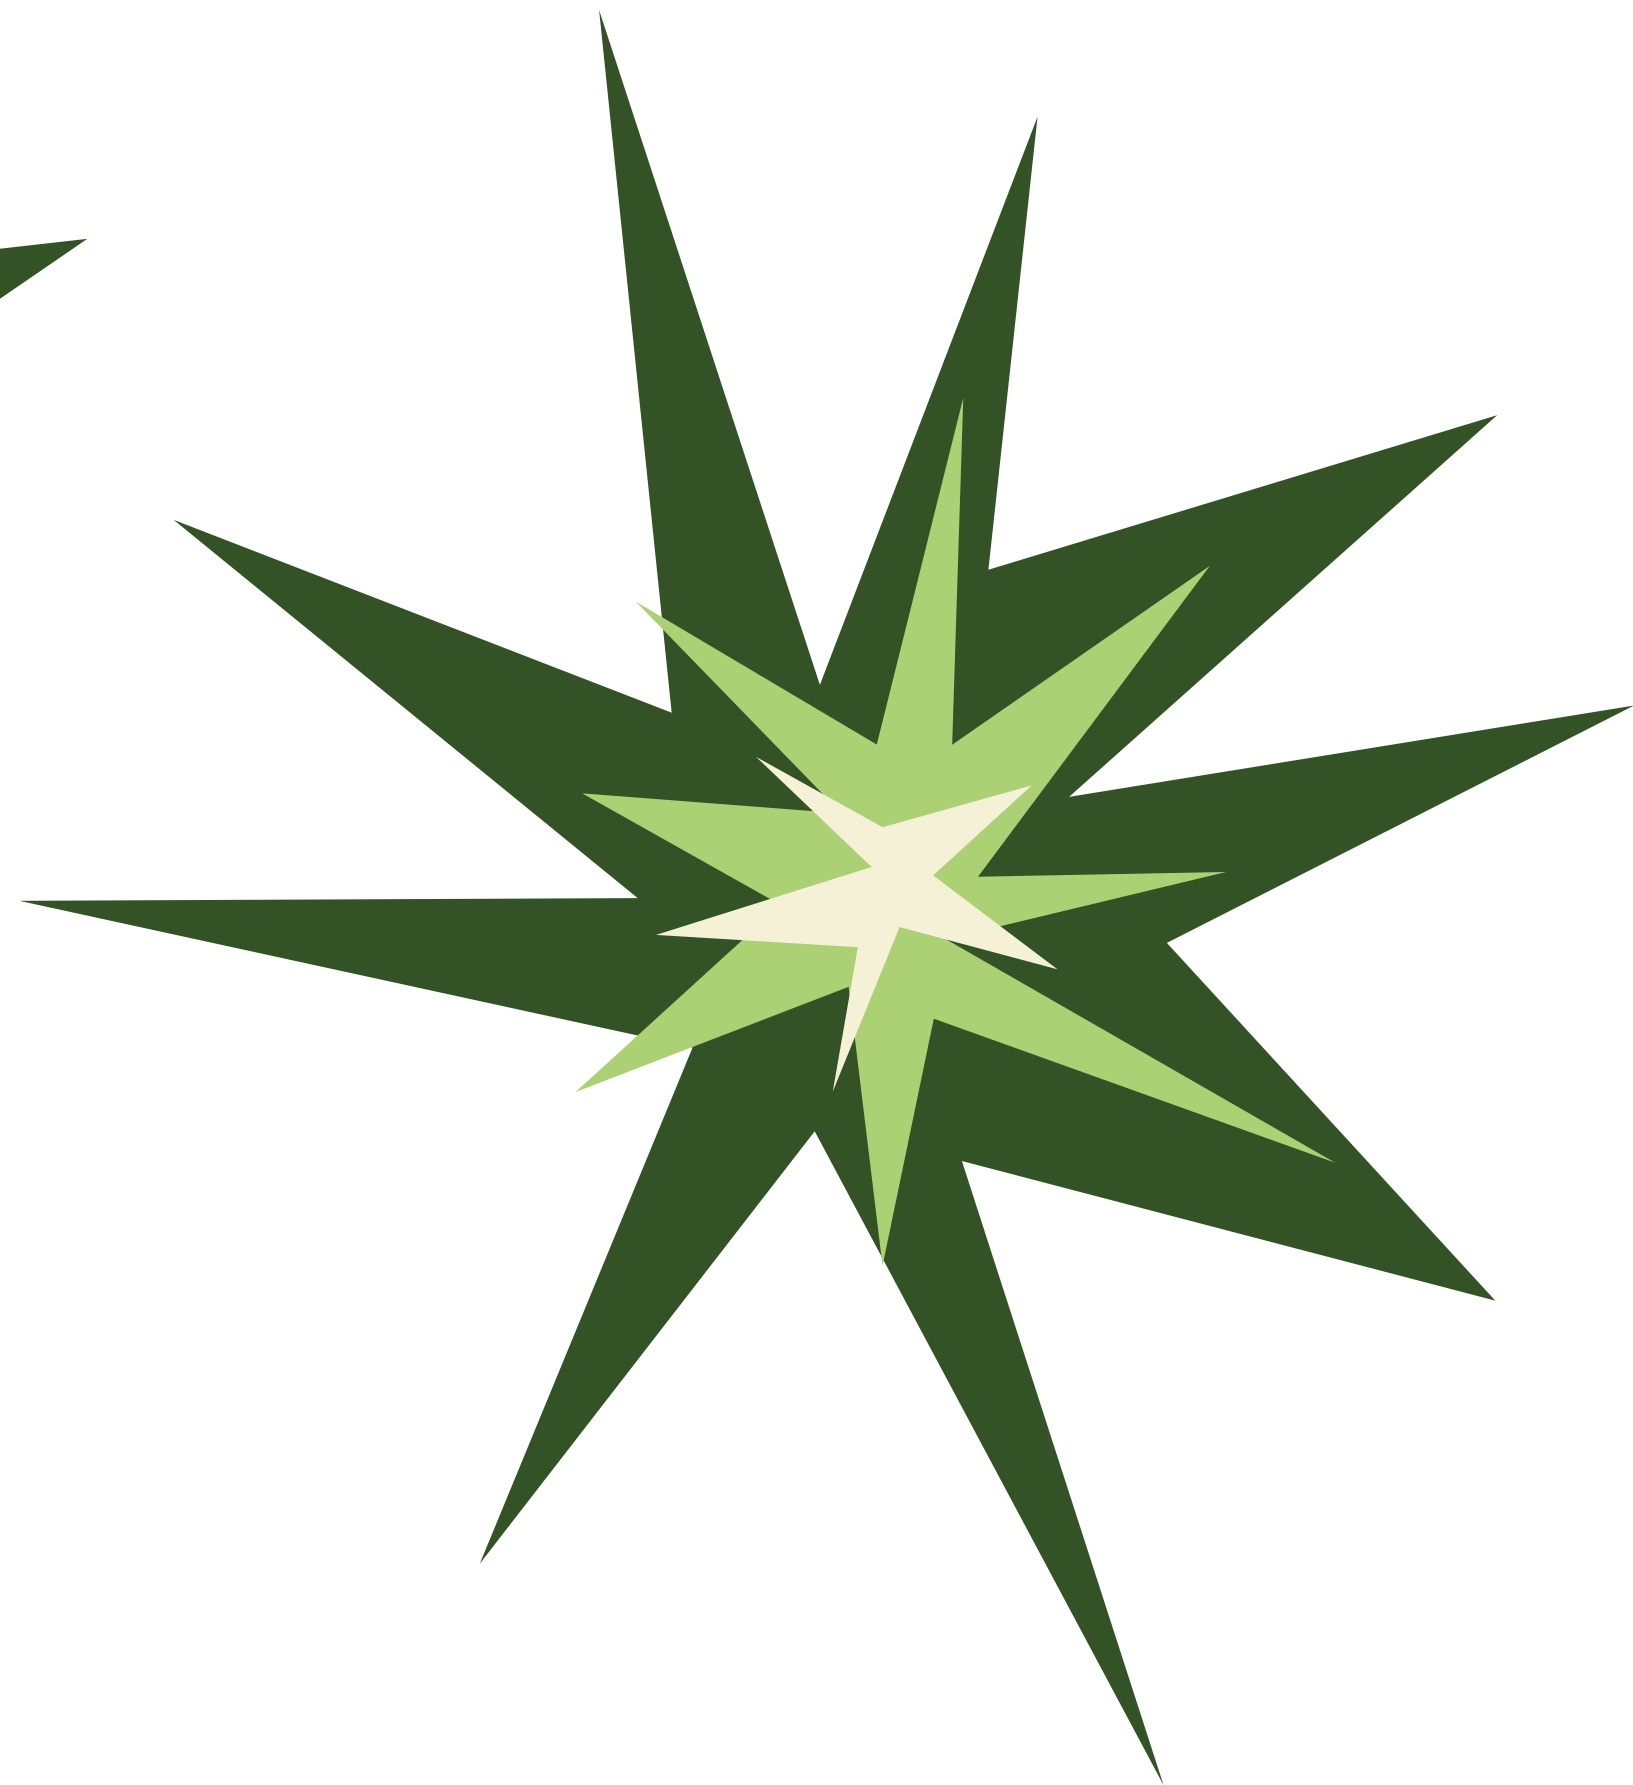

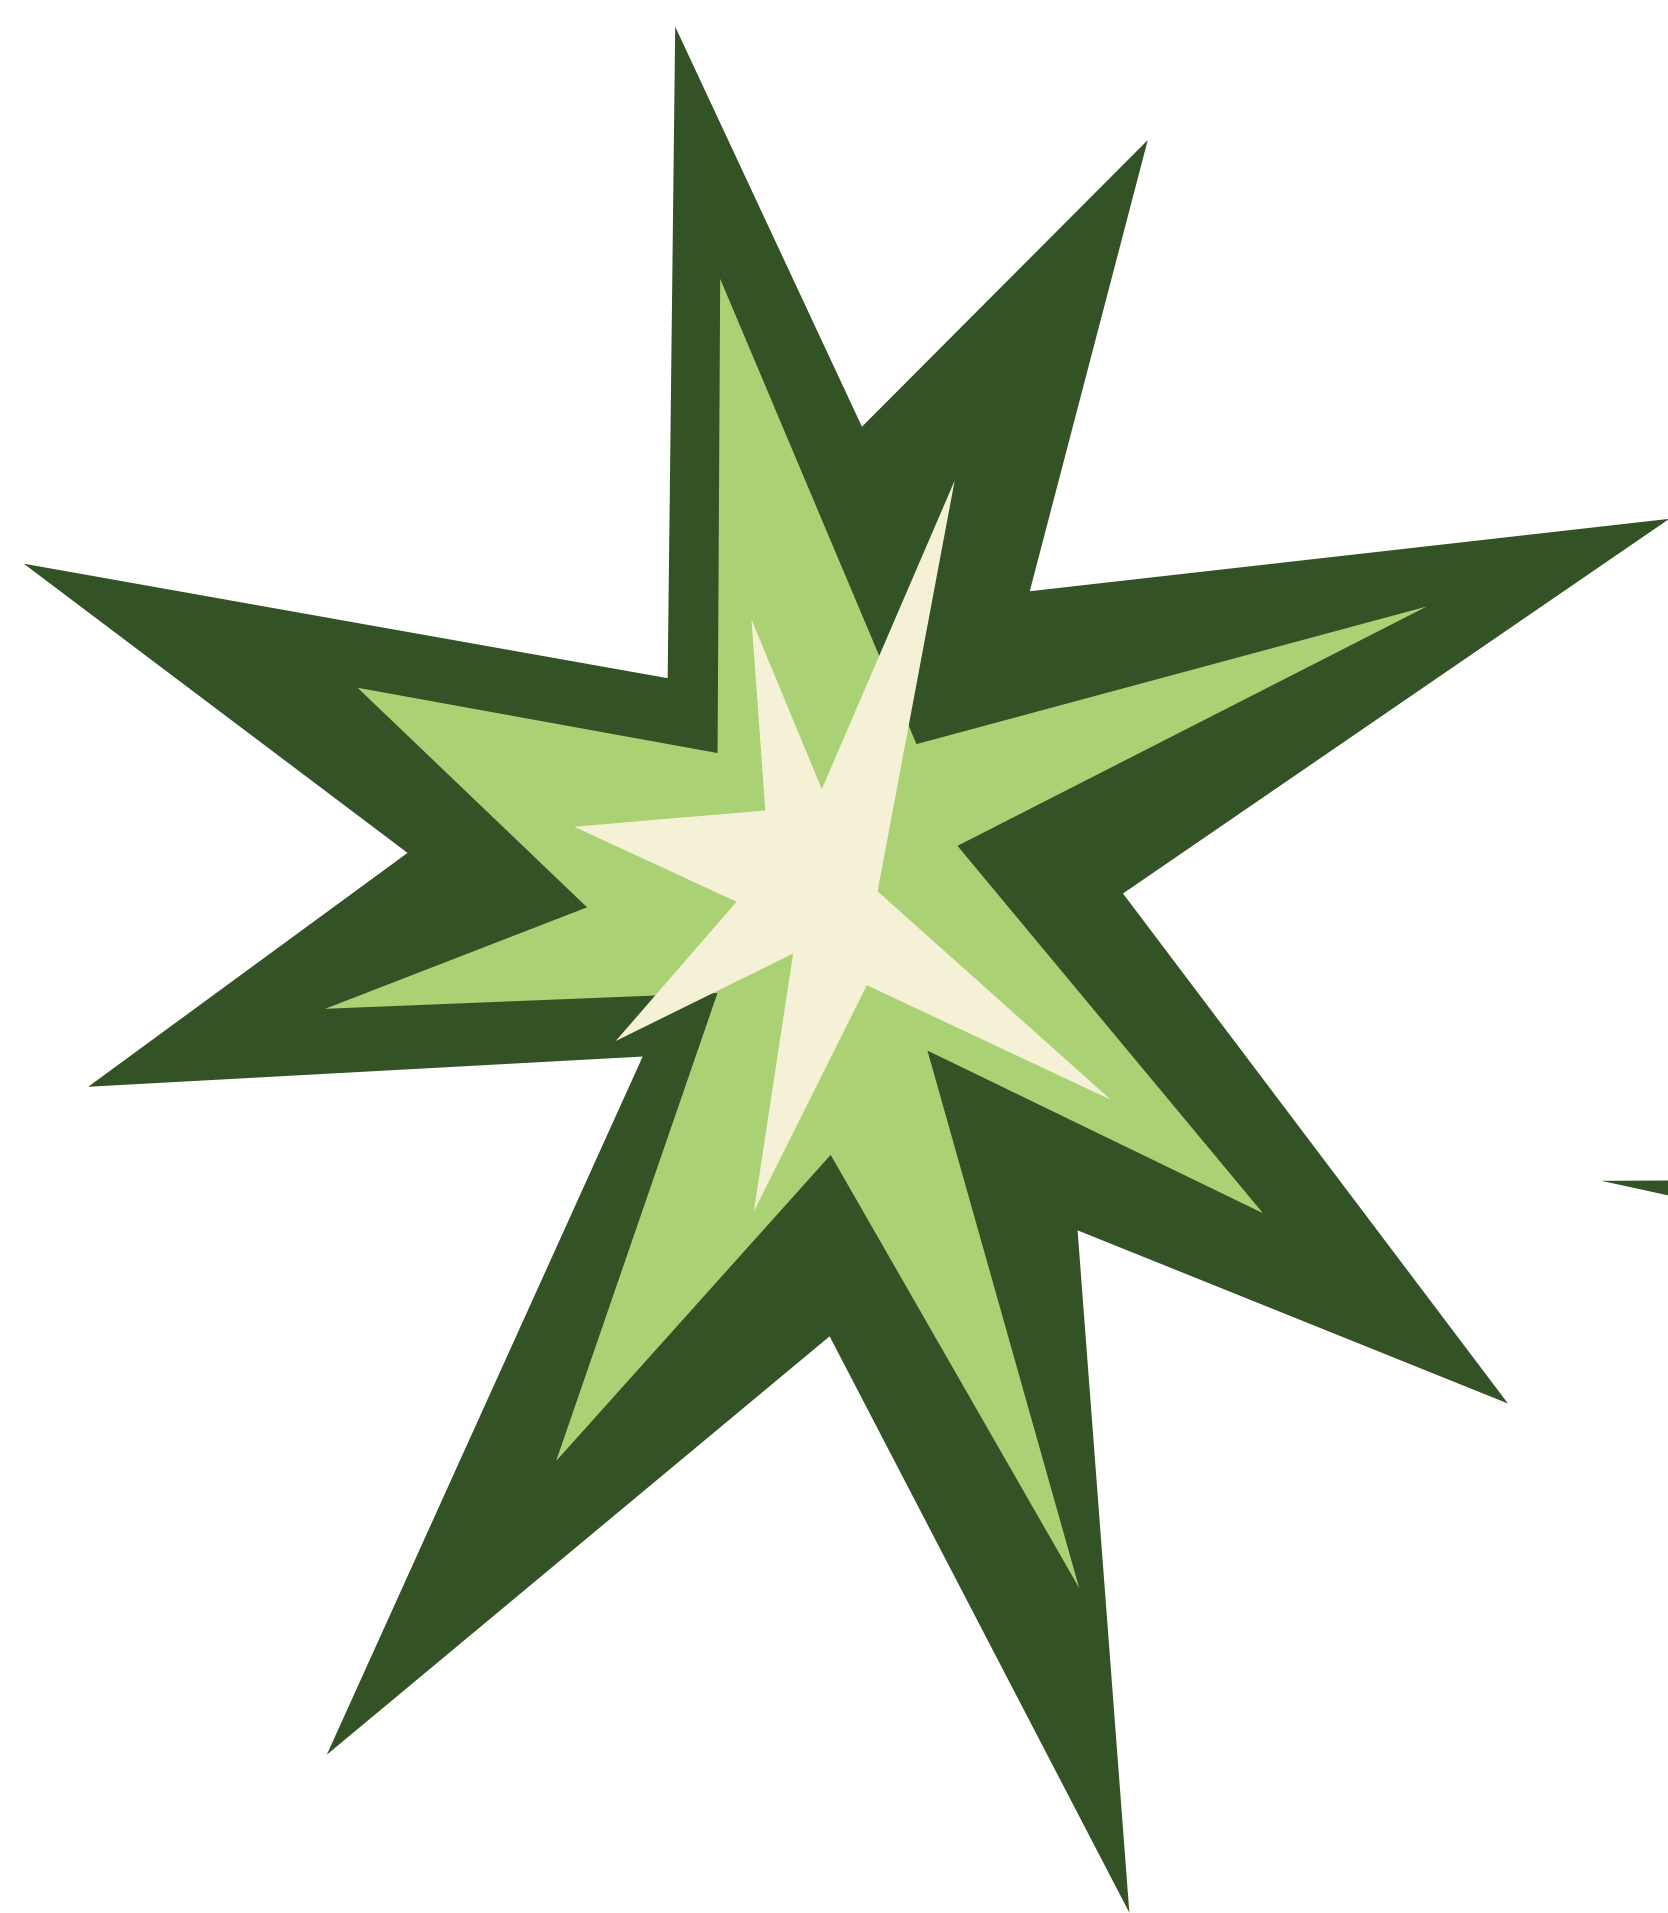

2096

Why do our cities
look like this?

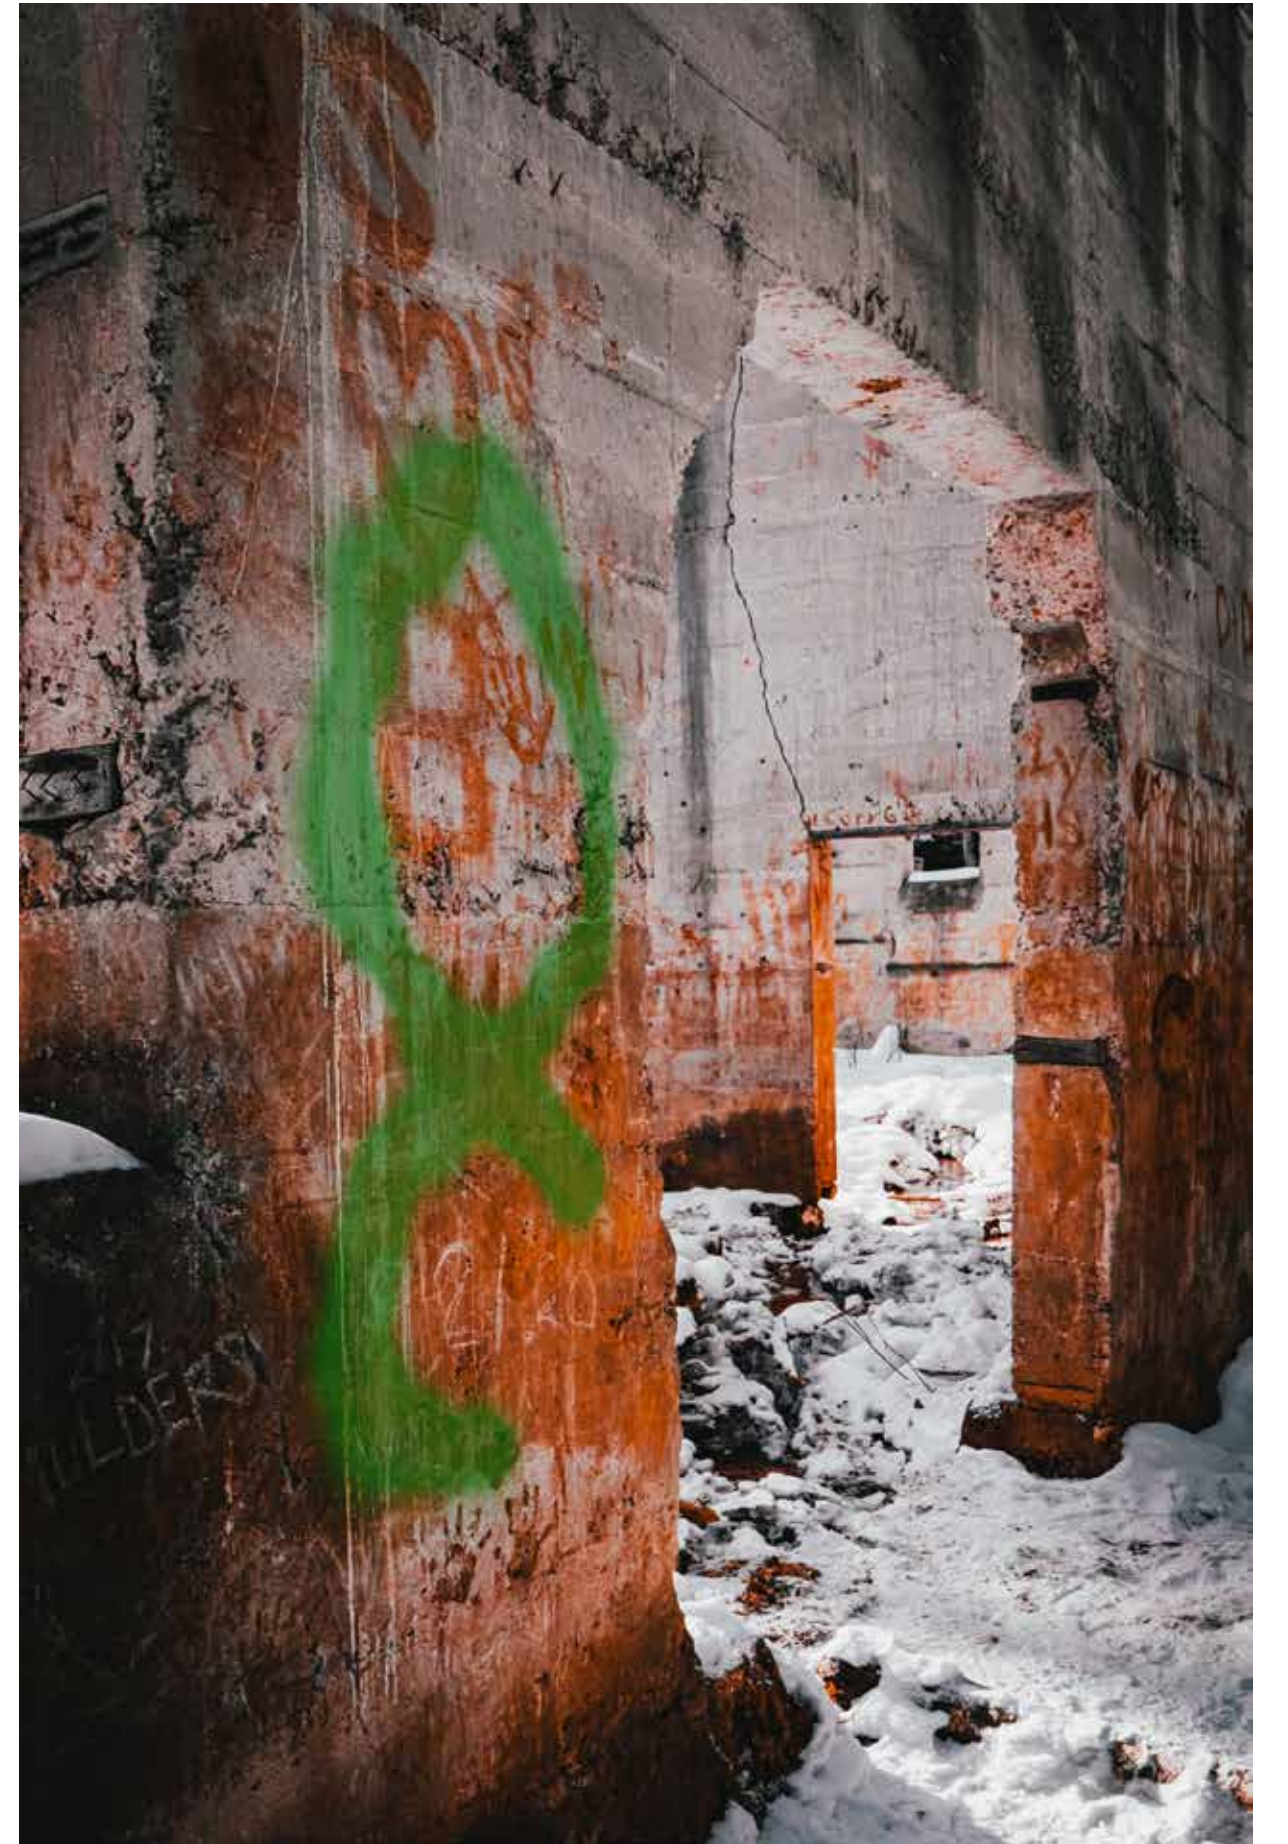

The people of Earth can no longer sit and wait in peace. The people of Mars have waged climate warfare on Earth, and peaceful protest has made little impact. If we want to avoid the absolute destruction of Earth and its ecosystems, we need to fight back.

Companies like The Ares Corporation have more than doubled the rate of a changing climate that was already disastrous. They do not listen to our pleas. They do not care about the inhabitants of Earth. We need to fight back.

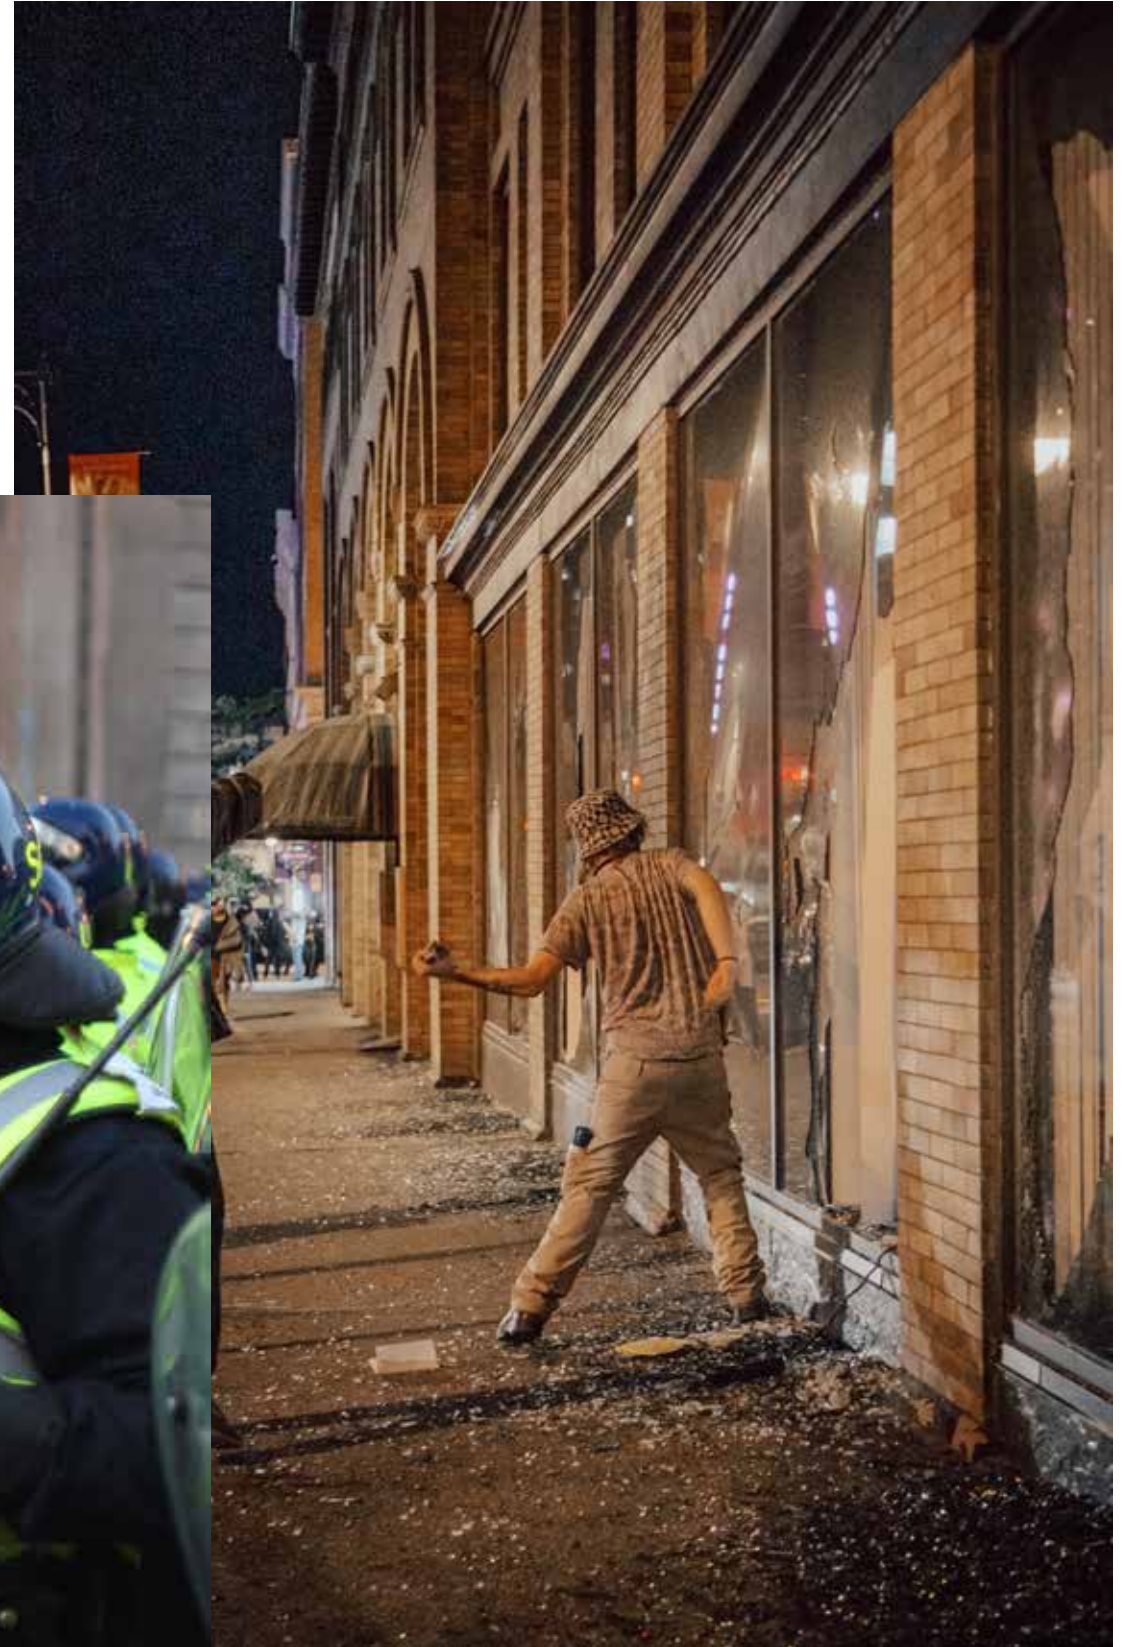

Our governments are doing nothing to stop Earth's demise. They put on a kind face and spit empty promises, while peddling billions of dollars towards Martian colonization. We cannot sit and wait for someone else to fix this problem. We need to fight back.

The time is now. Together, we can protect our Earth from destruction, and avenge all who we have lost to this war.

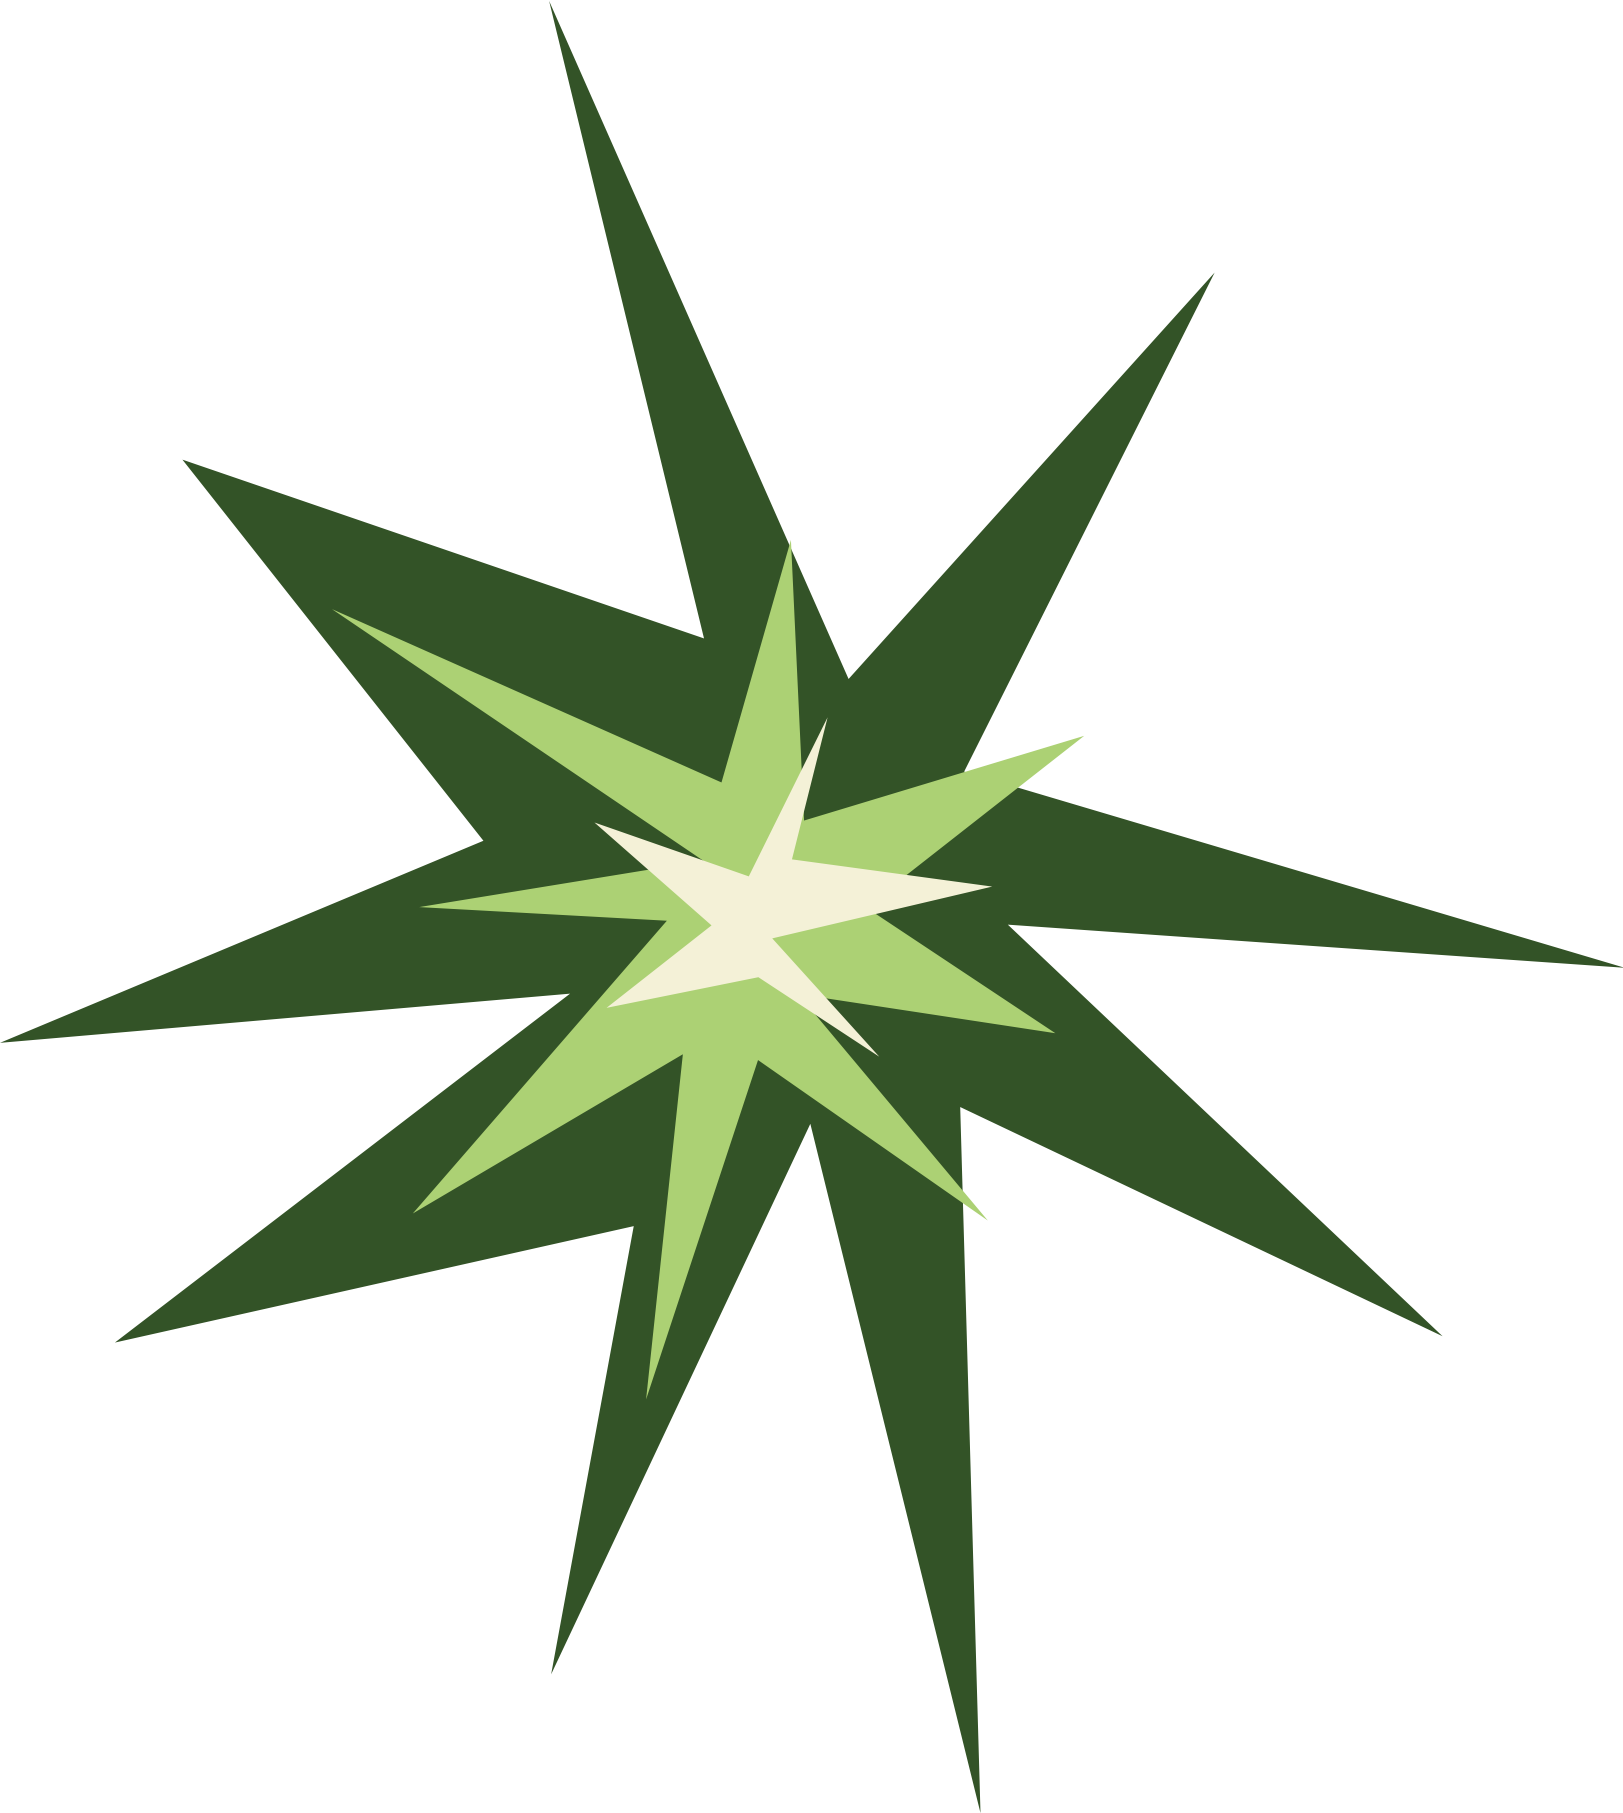

[Date: February 21st, 2109]

ARES: INTERNAL LOGS

As of today, February 21st, 2109, there has been a unanimous decision made within the Unified Nations to terminate all Mars colonization efforts. We are releasing a public statement in the coming weeks about the future of this company. We will not be resisting this decision any further.

Dead Mars.
Green Earth.

[Press Release: March 9th, 2109]

We at Ares have always strived to provide the highest degree of care and protection for our Earth that all live within it. We take pride in our ambitions to reach towards the future and all of the hope that it provides.

Our goal in traveling to Mars was always to provide humanity with the glimmering hope of innovation, with the goal of adventuring into a new world for all to share. We hoped that Mars would provide us with a future free of pollution, rot, and selfishness. We realize that our goals have not been accomplished.

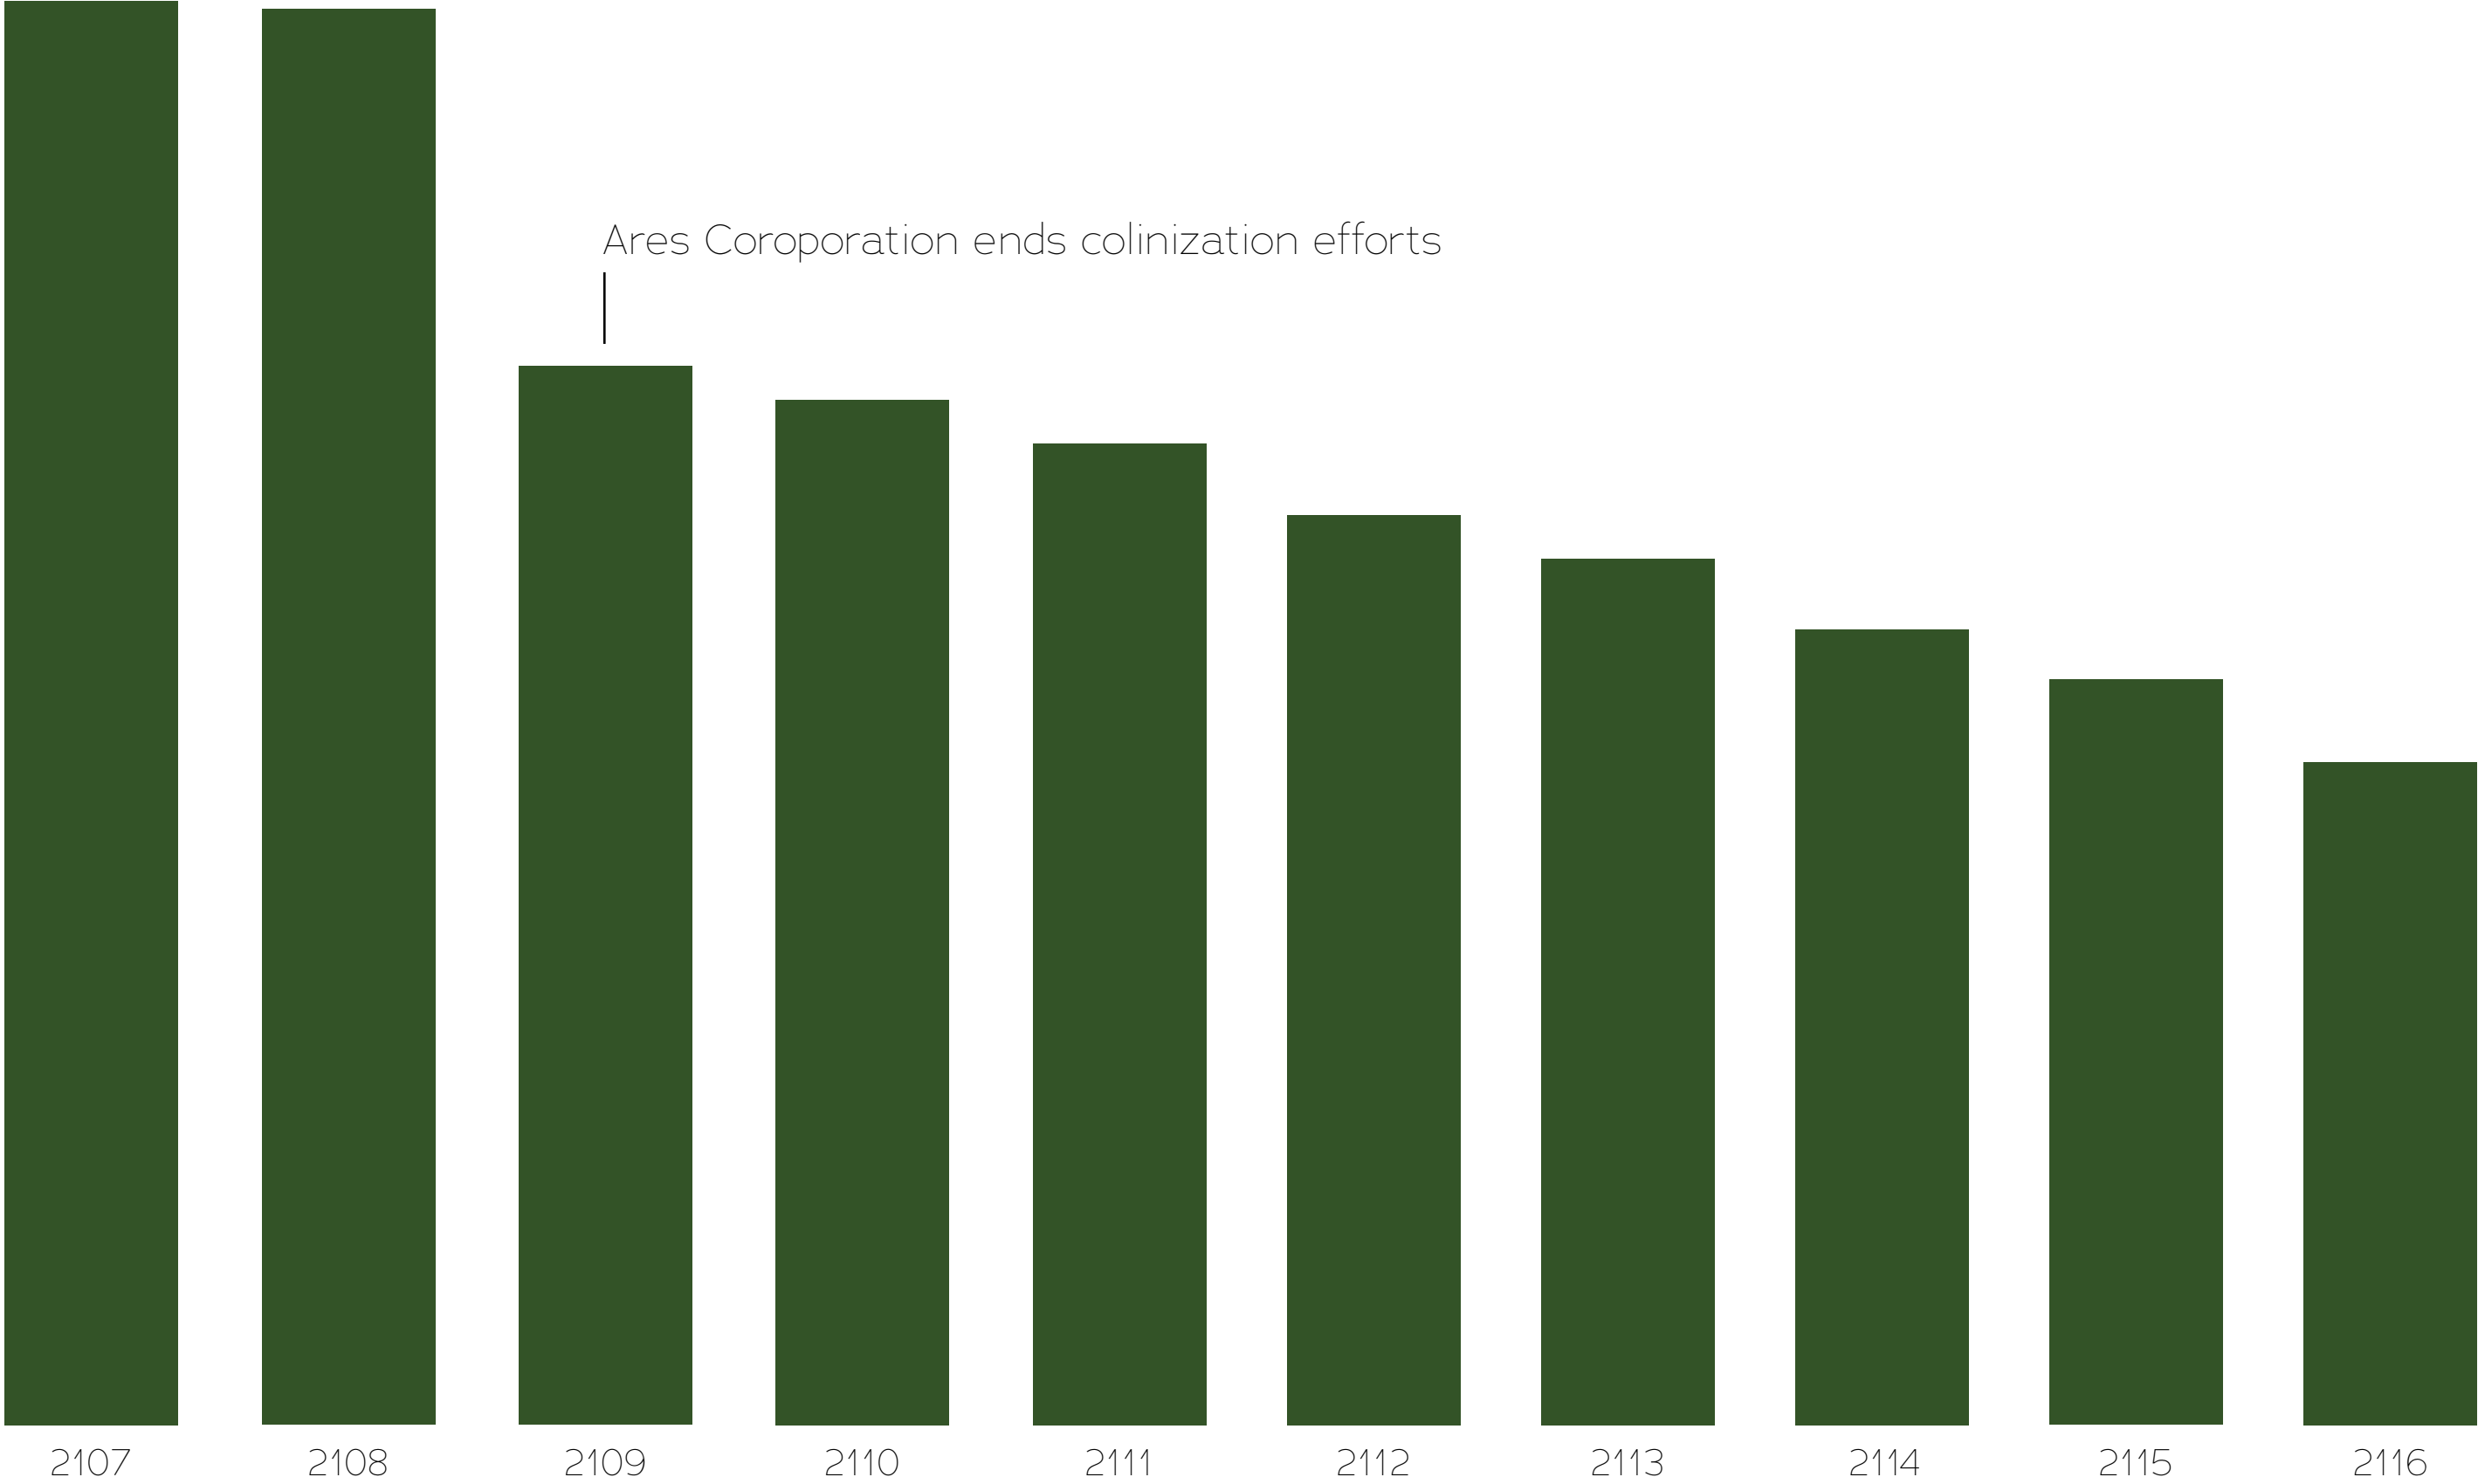

As of March 9th, 2109, Ares will be concluding its efforts towards building civilization on Mars. Though successful and groundbreaking in terms of innovation and breaking barriers in fields of technology, engineering, and medical society, we realize that our efforts in future-seeking have created strife with many communities.

Ares will be focusing its efforts towards the betterment of Earth and all who live within it. We hope to continue breaking the mold and bringing science to its greatest heights.

We are sincerlely grateful to everyone who has joined us on this spectacular journey.

Carbon Emissions from Factories

This project was completed through an extended process of iteration, ideation, and rapid production. Each page can be read as an emotional exploration into evocative design, as well as a small glimpse into an unprecedentedly large world, or a preceded future. Though the organizations and movements in this book are fictional, the imminence of climate change and the mass destruction of our planet are very real. The 100 highest-polluting companies account for 71% of global greenhouse gas emissions. If we want to protect our planet, we need to speak out against these corporations that are contributing mass waste with no regards to the Earth's future. Global warming is not a speculative problem. It's a real threat, and there's no escaping it.
